NewTechWays

Application Architecture Vs System Architecture

System level challenges
surface up in large scale systems

Scale, Reliability, Security, Deployment are
biggest concerns for a large-scale system

Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Latency Requirements

- UI page load in < 250ms
  - across the globe
- Customer transactions < 3 sec

- Latency is not an option
  - 10 years ago, Amazon found that every 100ms of latency cost them 1% in sales
  - Now Akamai study shows that every 100-millisecond delay in website load time can hurt sales by 6%
  - Google found an extra .5 seconds in search page generation time dropped traffic by 20%
  - A stockbroker can lose millions if their trading platform is 5ms behind its competition

As page load time goes from:

1s to 3s the probability of bounce **increases 32%**

1s to 5s the probability of bounce **increases 90%**

1s to 6s the probability of bounce **increases 106%**

1s to 10s the probability of bounce **increases 123%**

Scalability Requirements

- 10 million requests/day
- 1K to 100K simultaneous users
- Global customer base
- 100 million products
- Transaction data for last 5 years
- Petabytes of log data

- For 10 M requests with average response size of 10KB
  - Data Outflow = 10M x 10KB = 100 GB
- For 100 M orders/year with average order size of 10 KB, five years data
  - Data storage = 5 x 100M x 10KB = 5 TB
- For 100 M products with average product description/image size of 1 MB
  - Data Storage = 100M x 1MB = 100 TB
- Logs generated and archived
  - Data Storage => in Petabytes
- Buying customers in 100 countries

NewTechWays

Availability & Reliability Requirements

- Unavailability results in
  - Business loss
  - Reputation loss
- 99.95% Availability
  - Maximum cumulative disruption of 4 hours 22 minutes in a year
- 99.999999999% Durability for storage systems
  - Data once stored is practically never lost
- Disaster Recovery
  - Operations to continue even if a region goes down due to a natural calamity

Copyright © 2020 newtechways.com All Rights Reserved

Security Requirements

- Infrastructure protection
  - Network access
  - System access
  - Service access
- Data Protection
  - Data sensitivity classification
  - Protect data at rest
  - Protect data on wire
  - Data backup & replication
- Identity & Access Management
  - Authentication, Authorization
  - Role based access

> **"The knock-on effect of a data breach can be devastating for a company. When customers start taking their business—and their money—elsewhere, that can be a real body blow."**
>
> CHRISTOPHER GRAHAM

NewTechWays

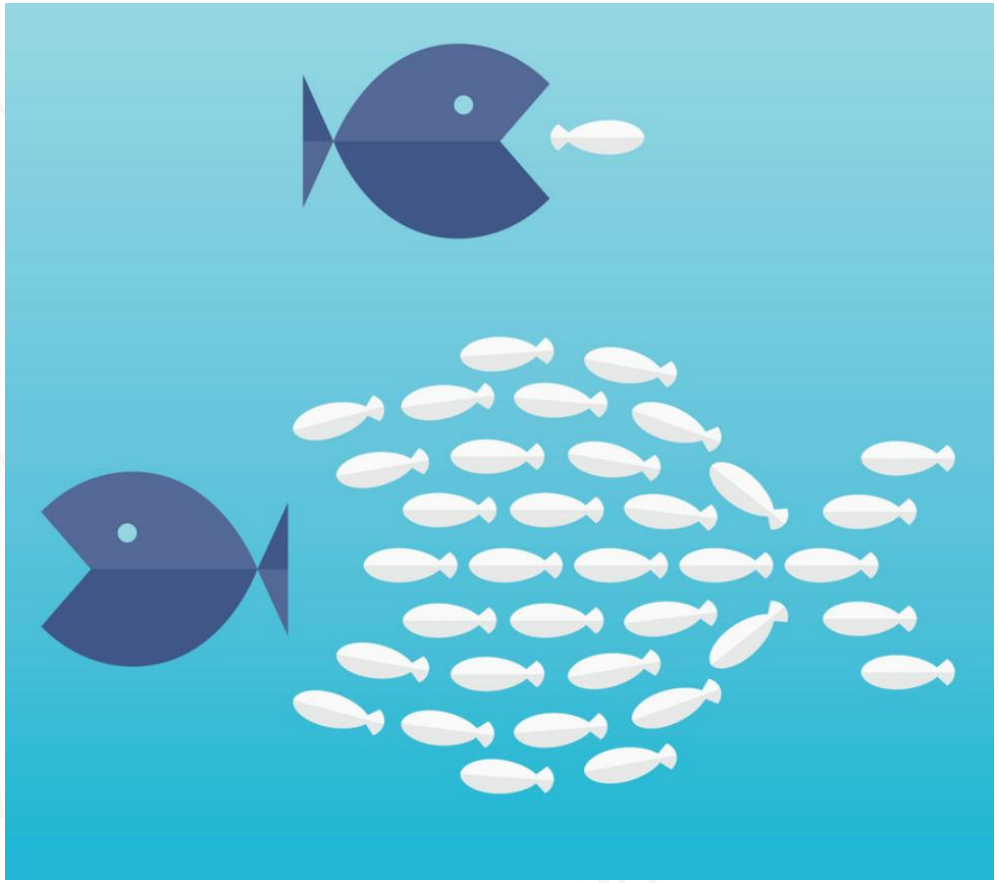
Scalability Principle

- Monolith is an anti-pattern for Scalability
- Scalability goes up with
  - Decentralization
    - More specialized workers – Services
    - More workers – Instances, Processors, Threads
  - Independence
    - Multiple workers are as good as a single worker if they can't work independently
    - They must work concurrently to maximum extent
    - Independence is impeded by
      - Shared resources
      - Shared mutable data

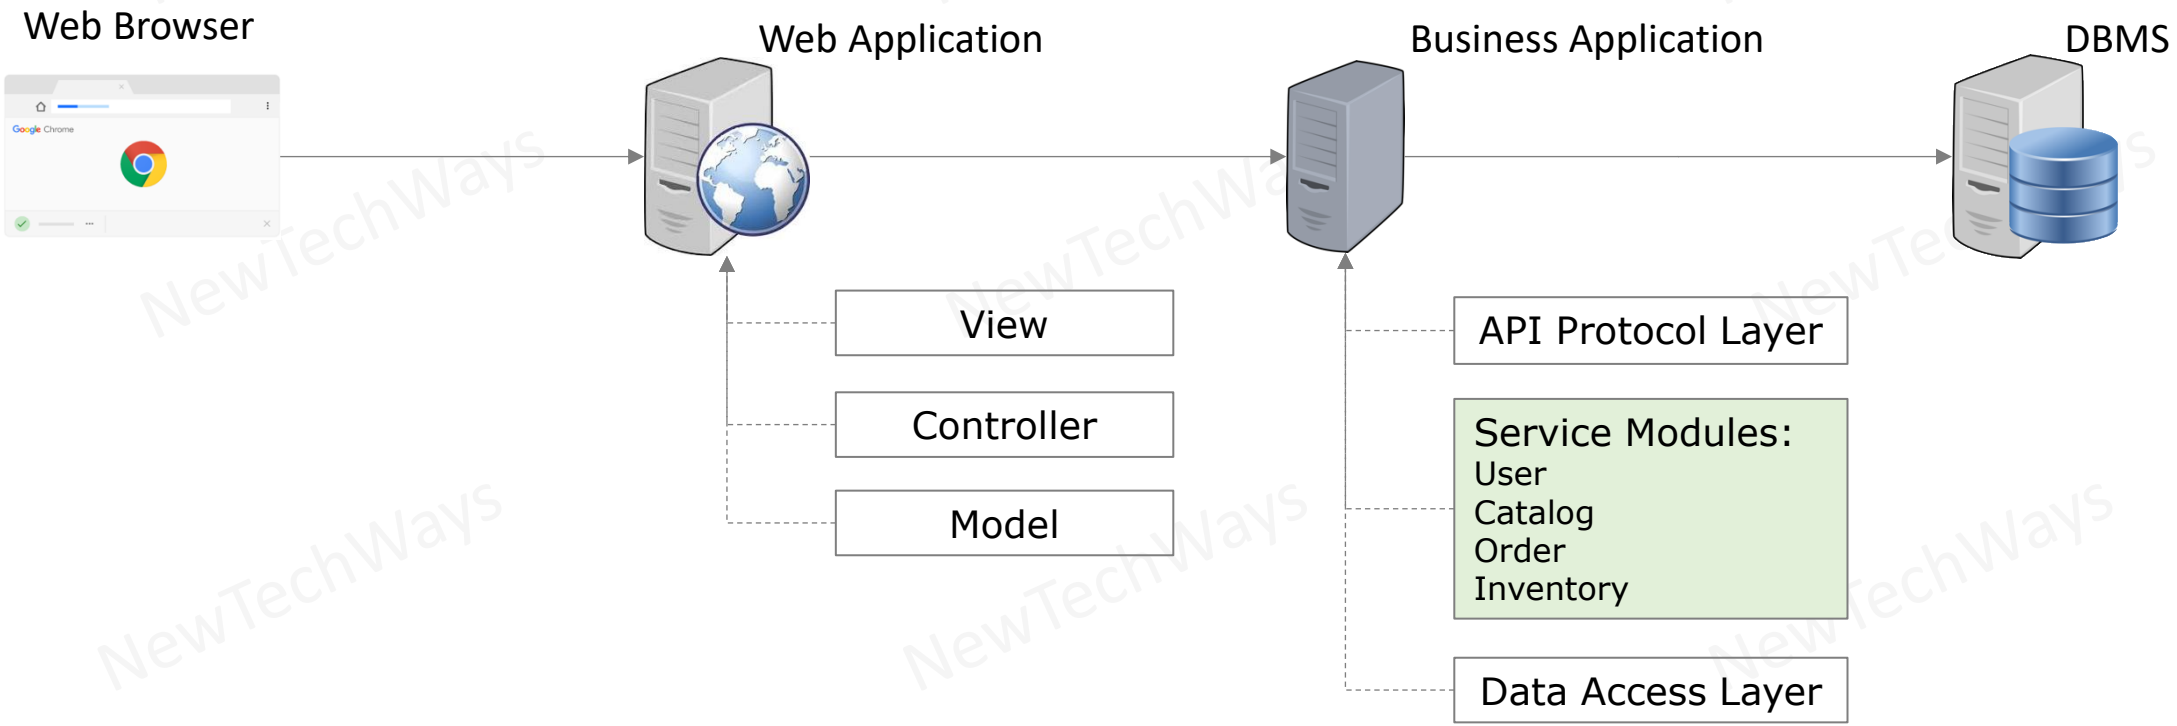


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Modularity

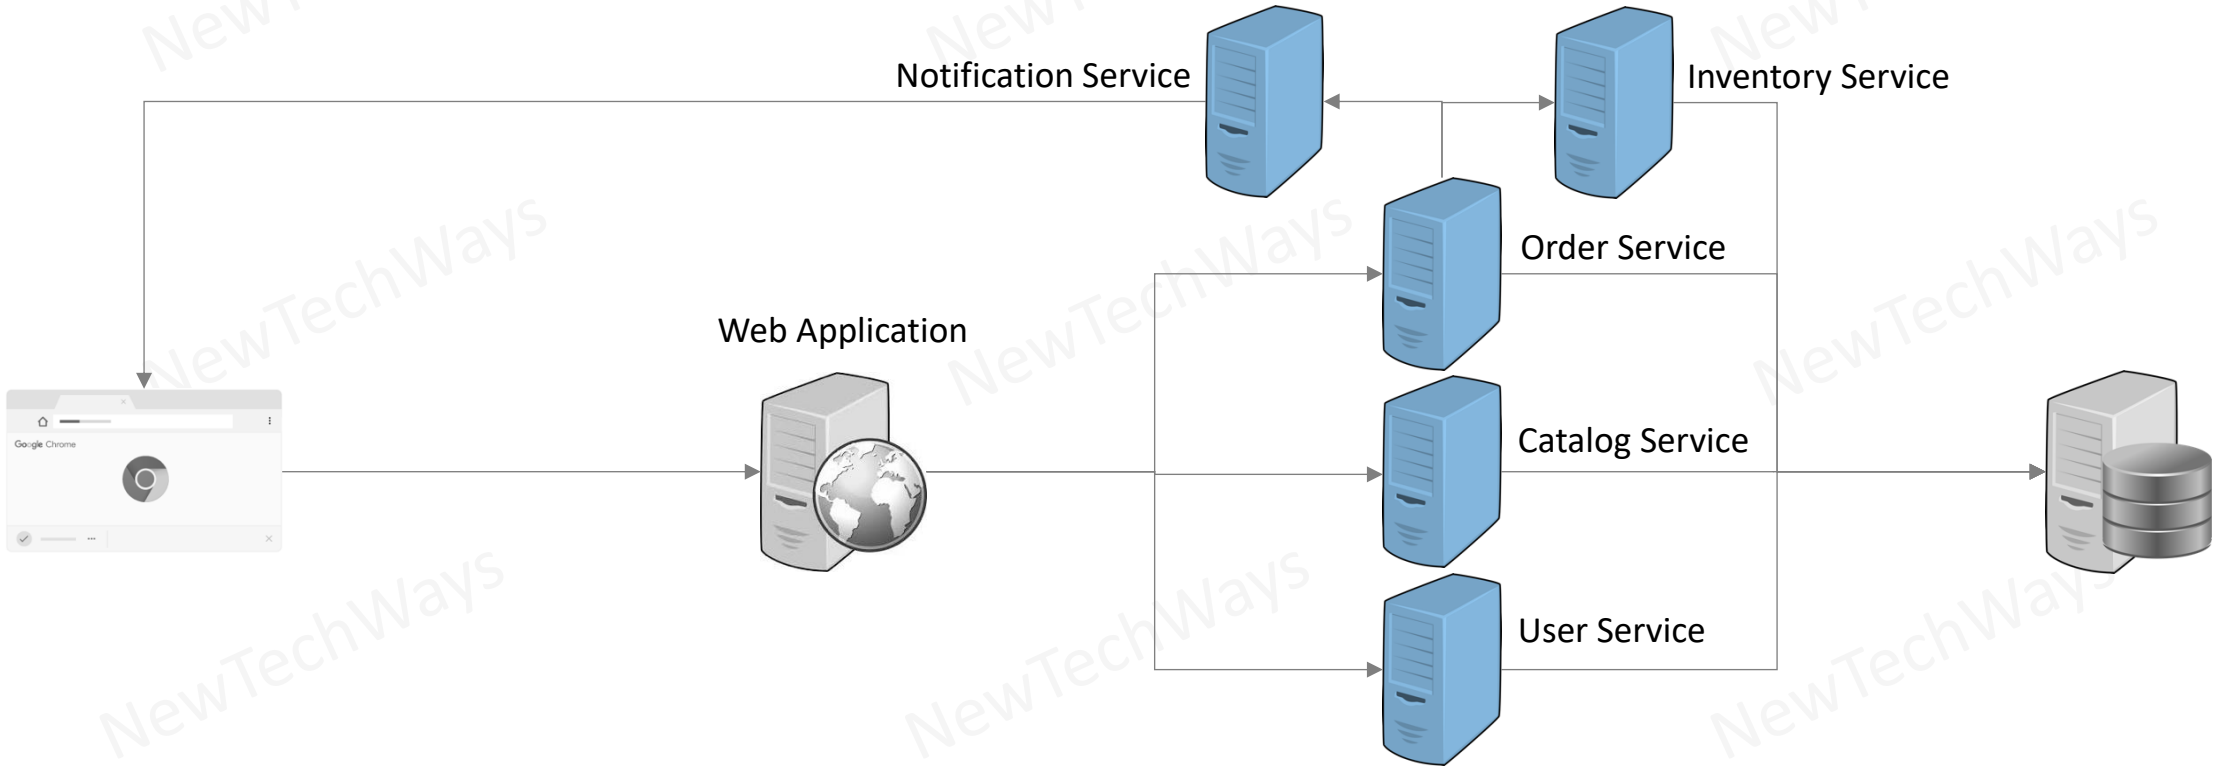
- Scalable architecture starts with modularity
  - Provides the foundation for breaking a system function/service into more specialized functions/services



Copyright © 2020 newtechways.com All Rights Reserved

Specialized Services – WebServices

- Services can be scaled differently e.g., Number of instances

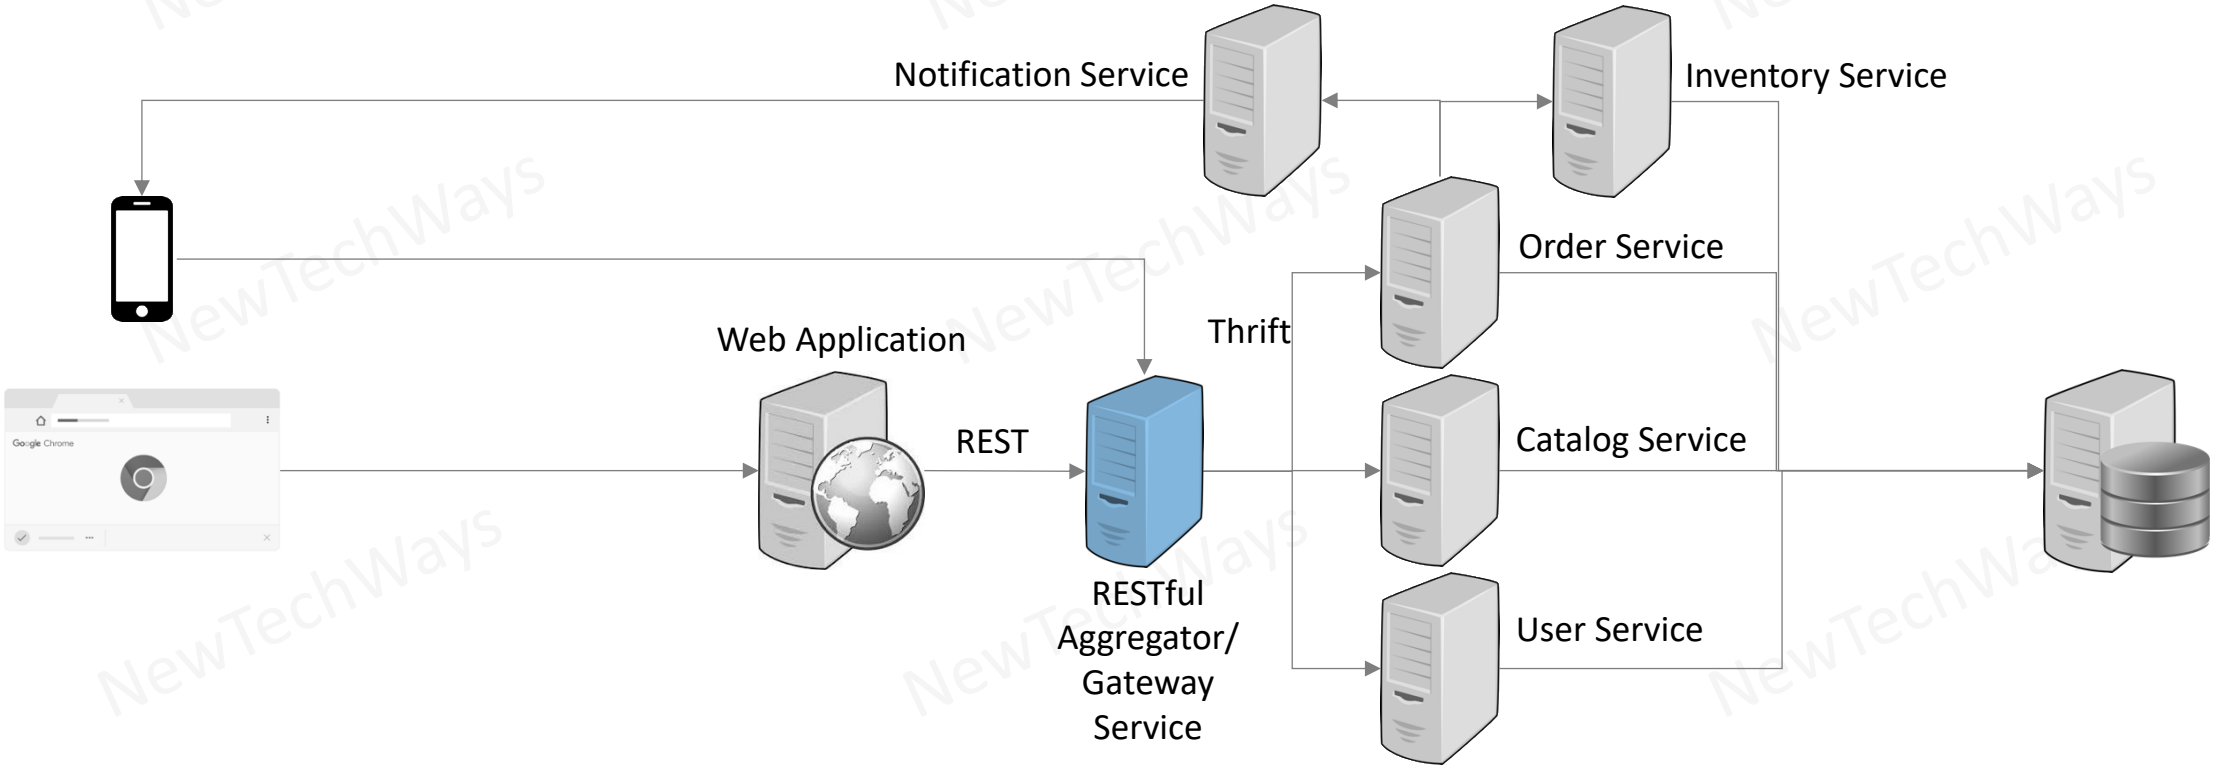


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Aggregator Service & RESTful API – Mobile Support

- REST for external interface interoperability & Mobile Support
- RPC for internal communication performance

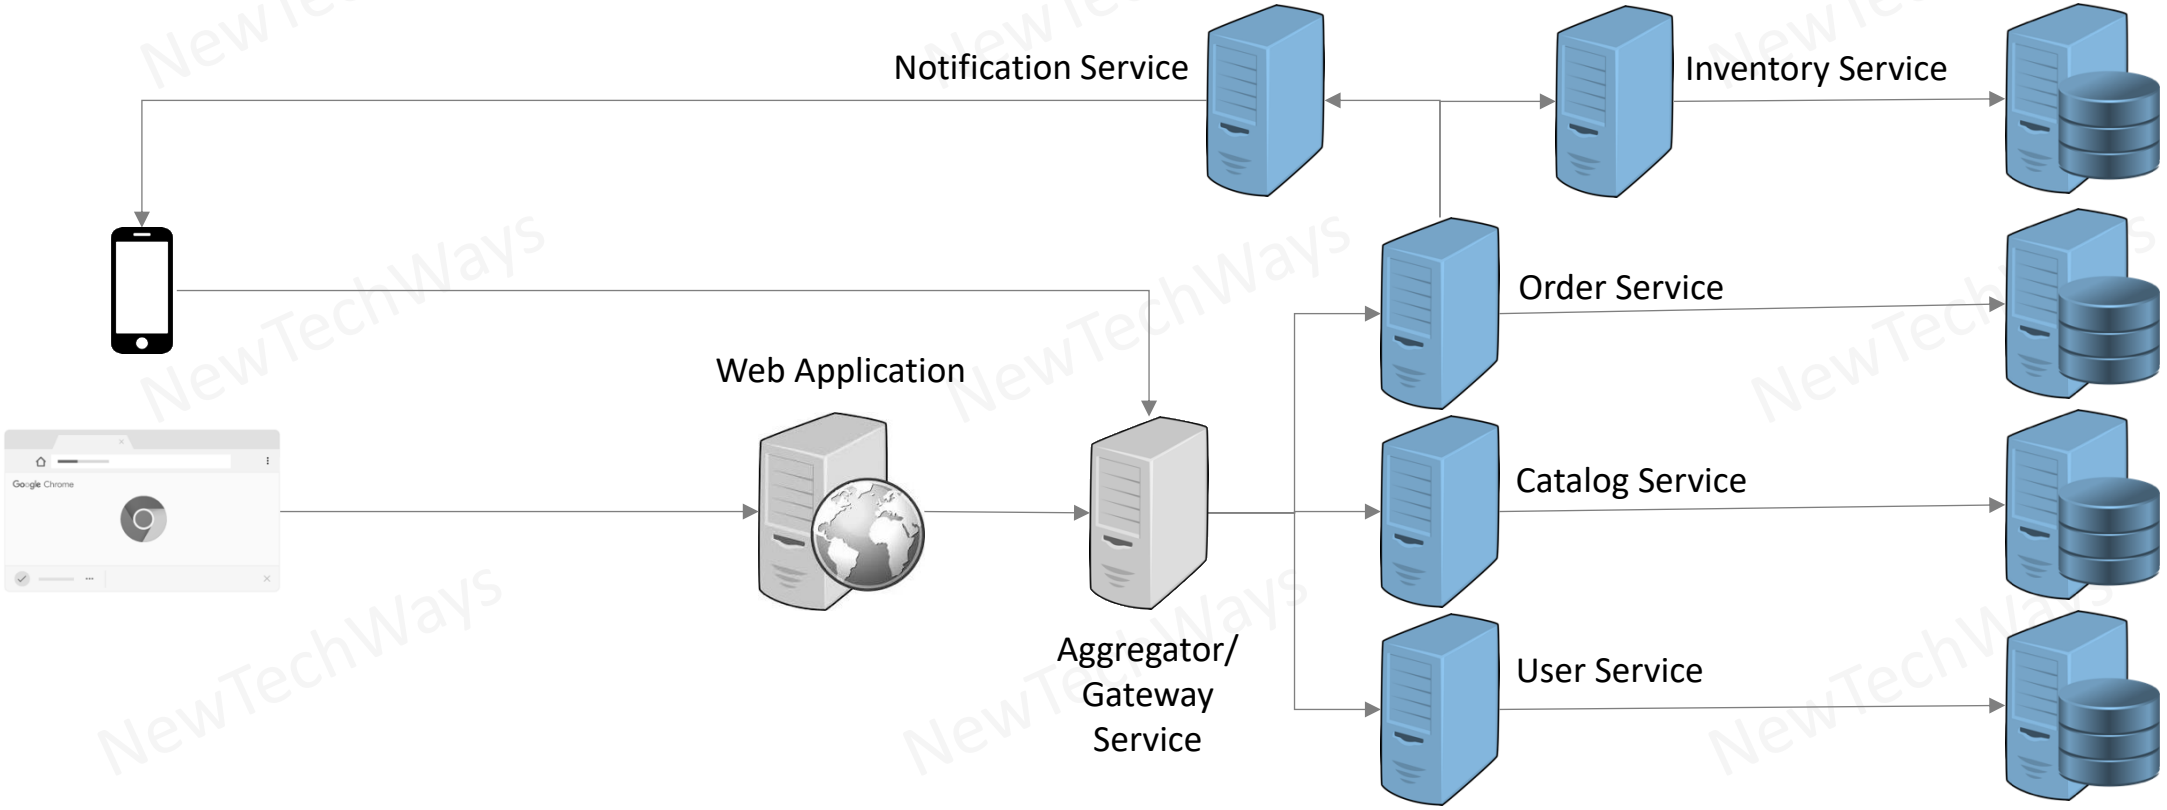


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Independent Services – MicroServices

- Micro-Services can be scaled differently and deployed independently

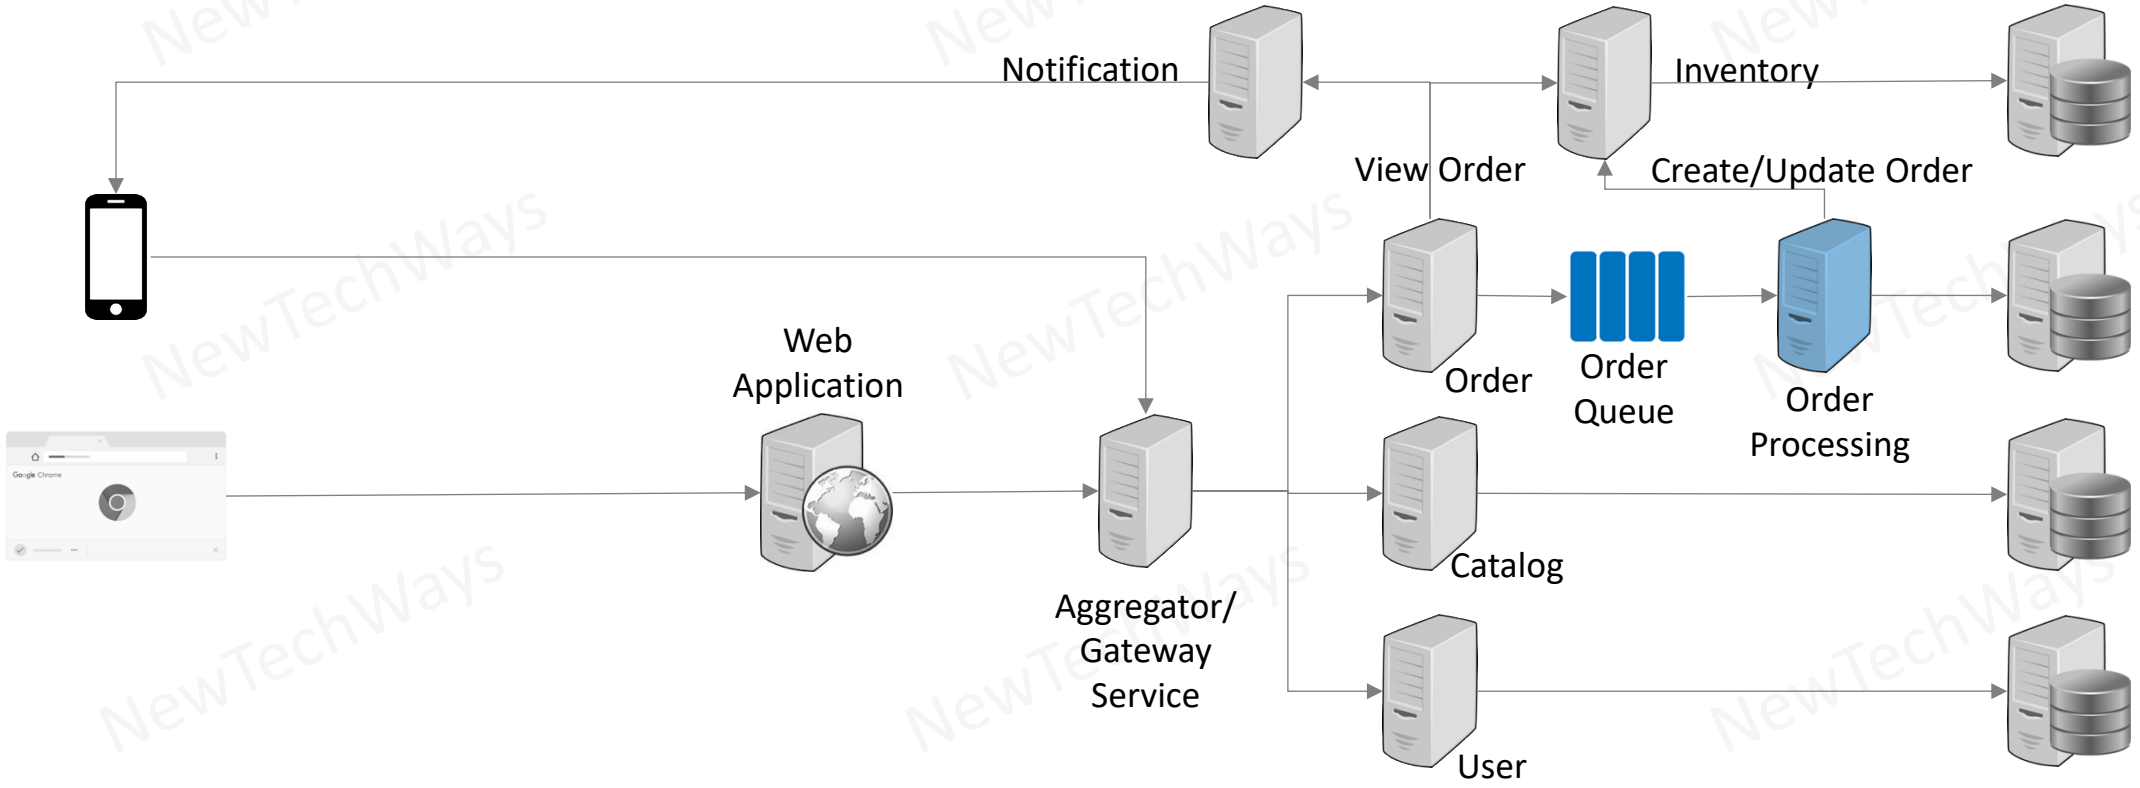


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Asynchronous Services

- Updates can be done asynchronously to buffer peak loads and to reduce response latency

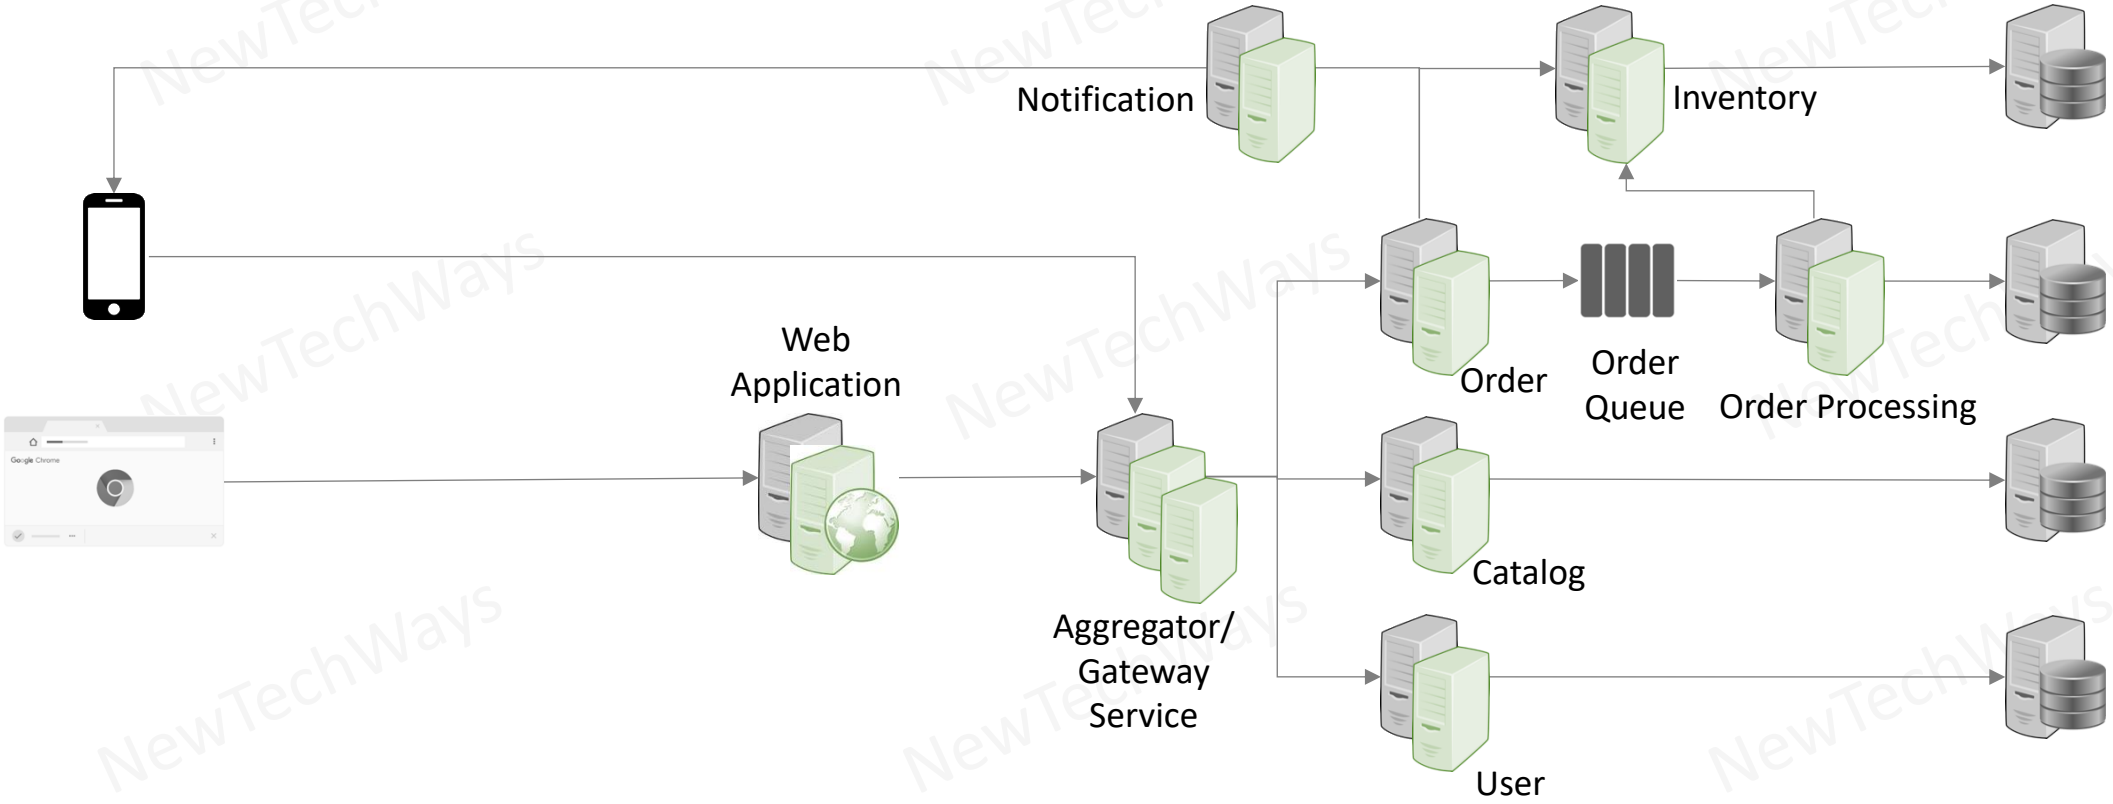


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Stateless Replication

- Replication provides more computation power

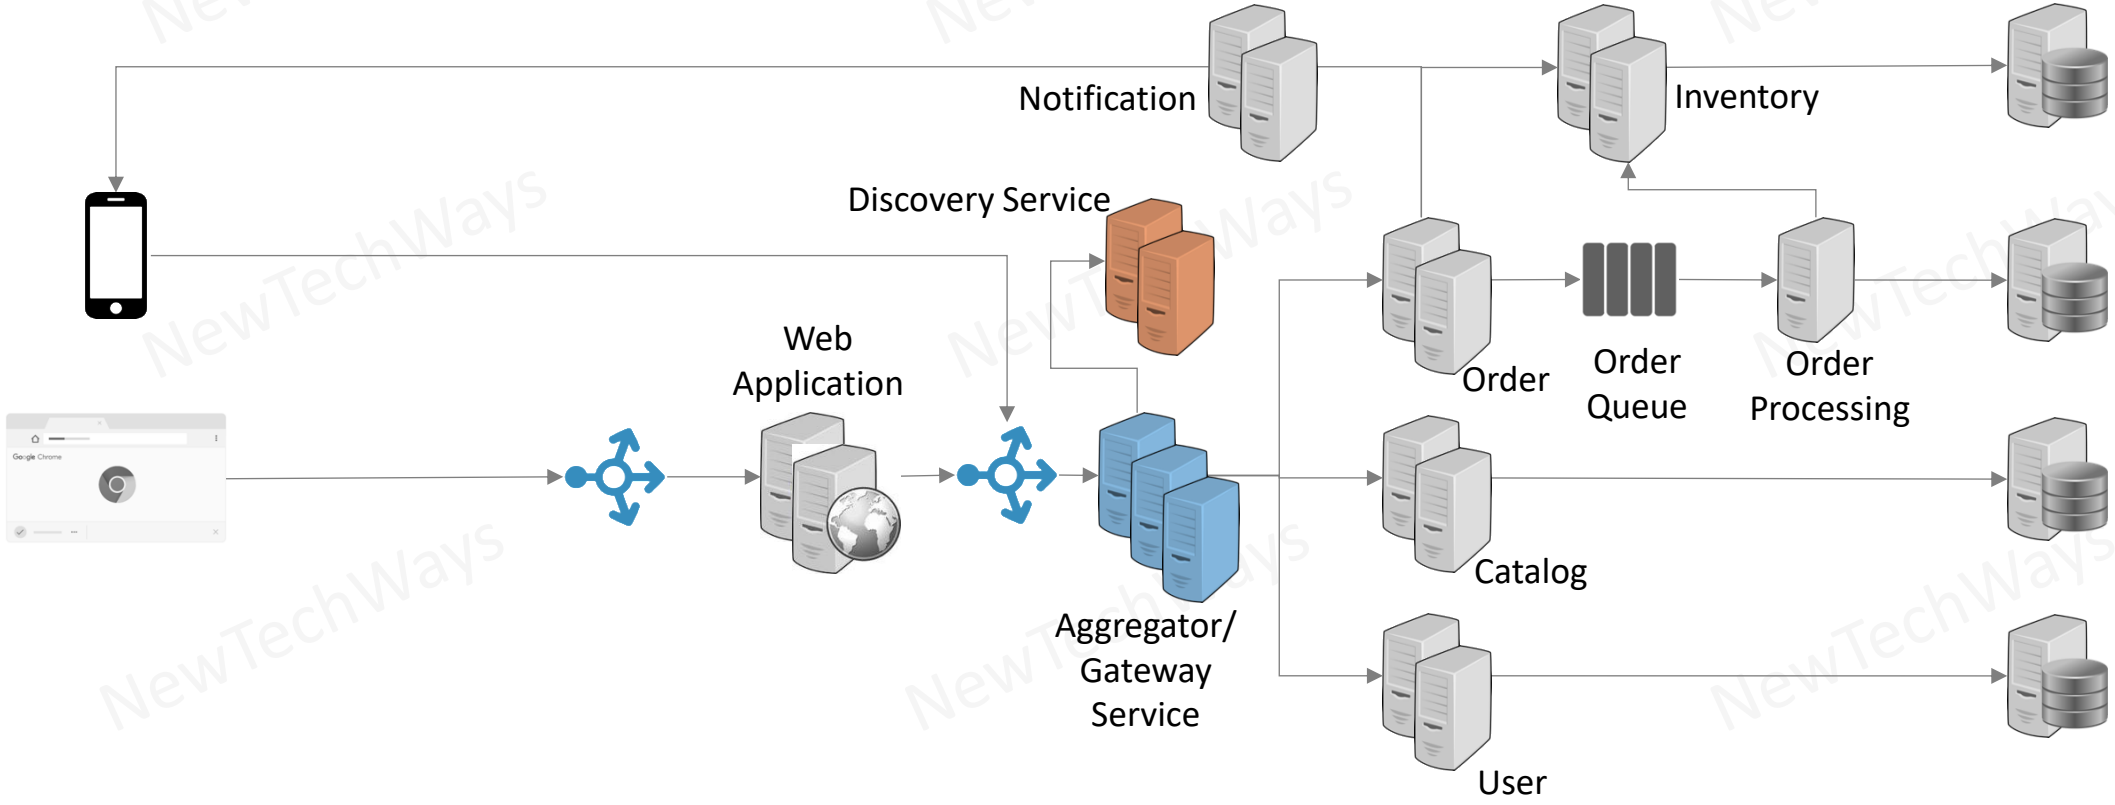


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Load Balancing & Discovery

- Load Balancers for routing and load balancing
- Discovery services for naming and tracking healthy services

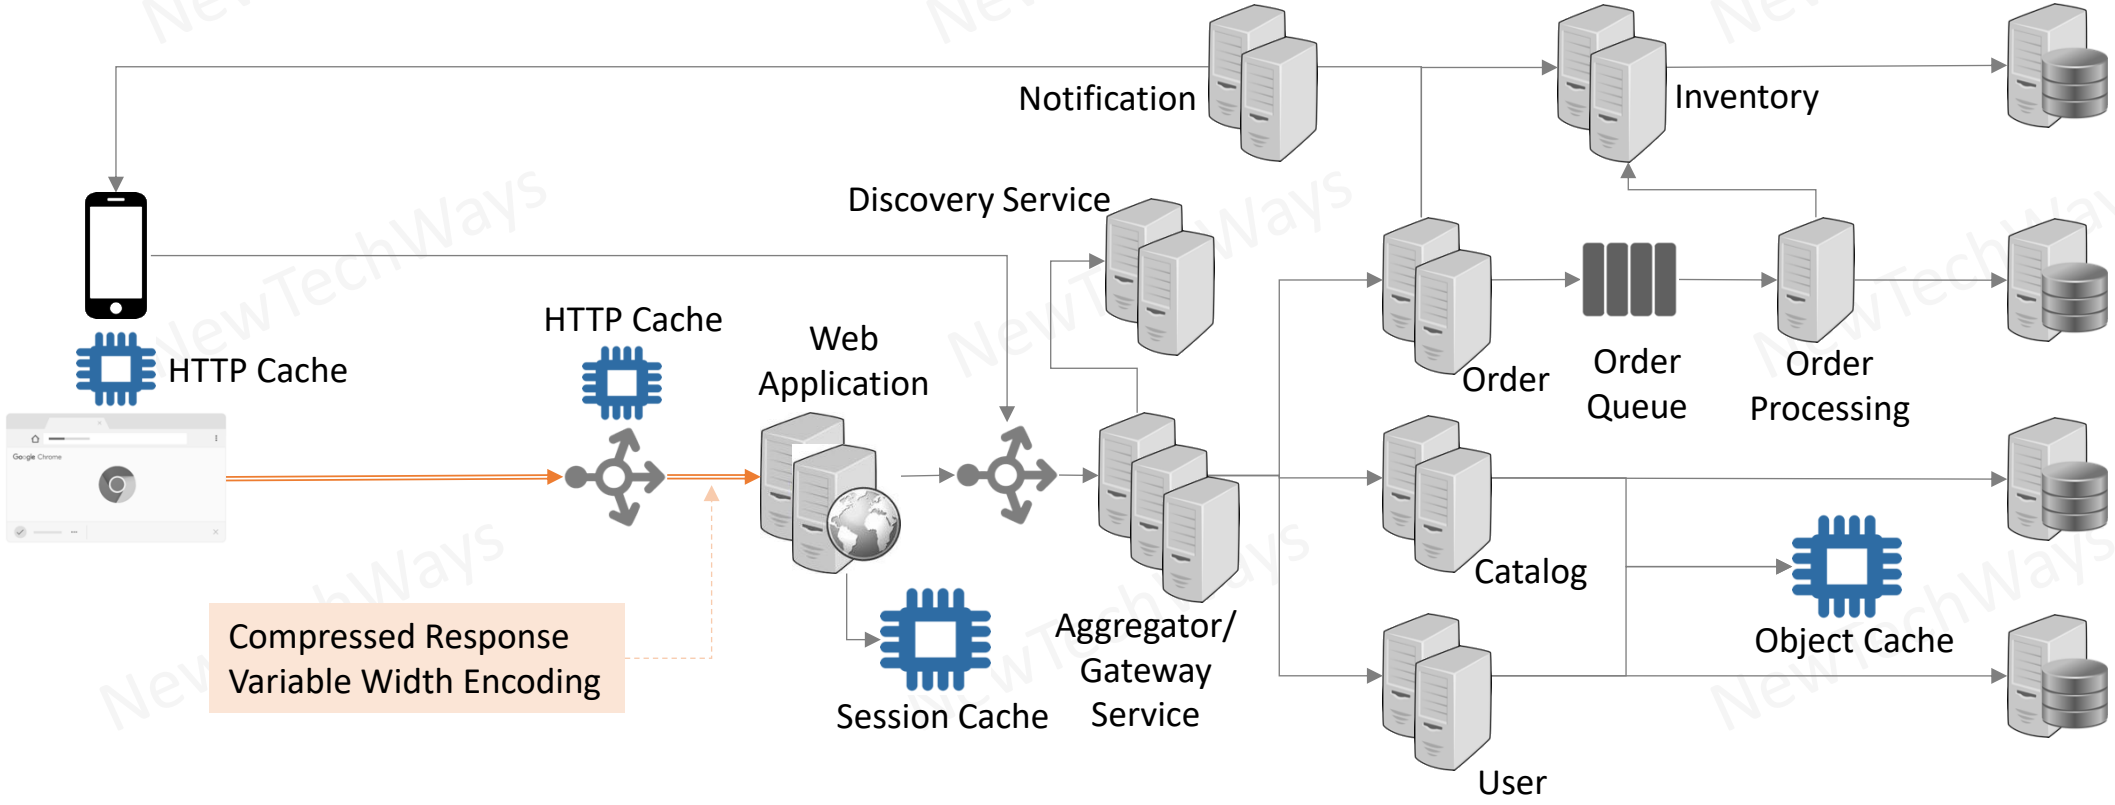


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Caching & Compression

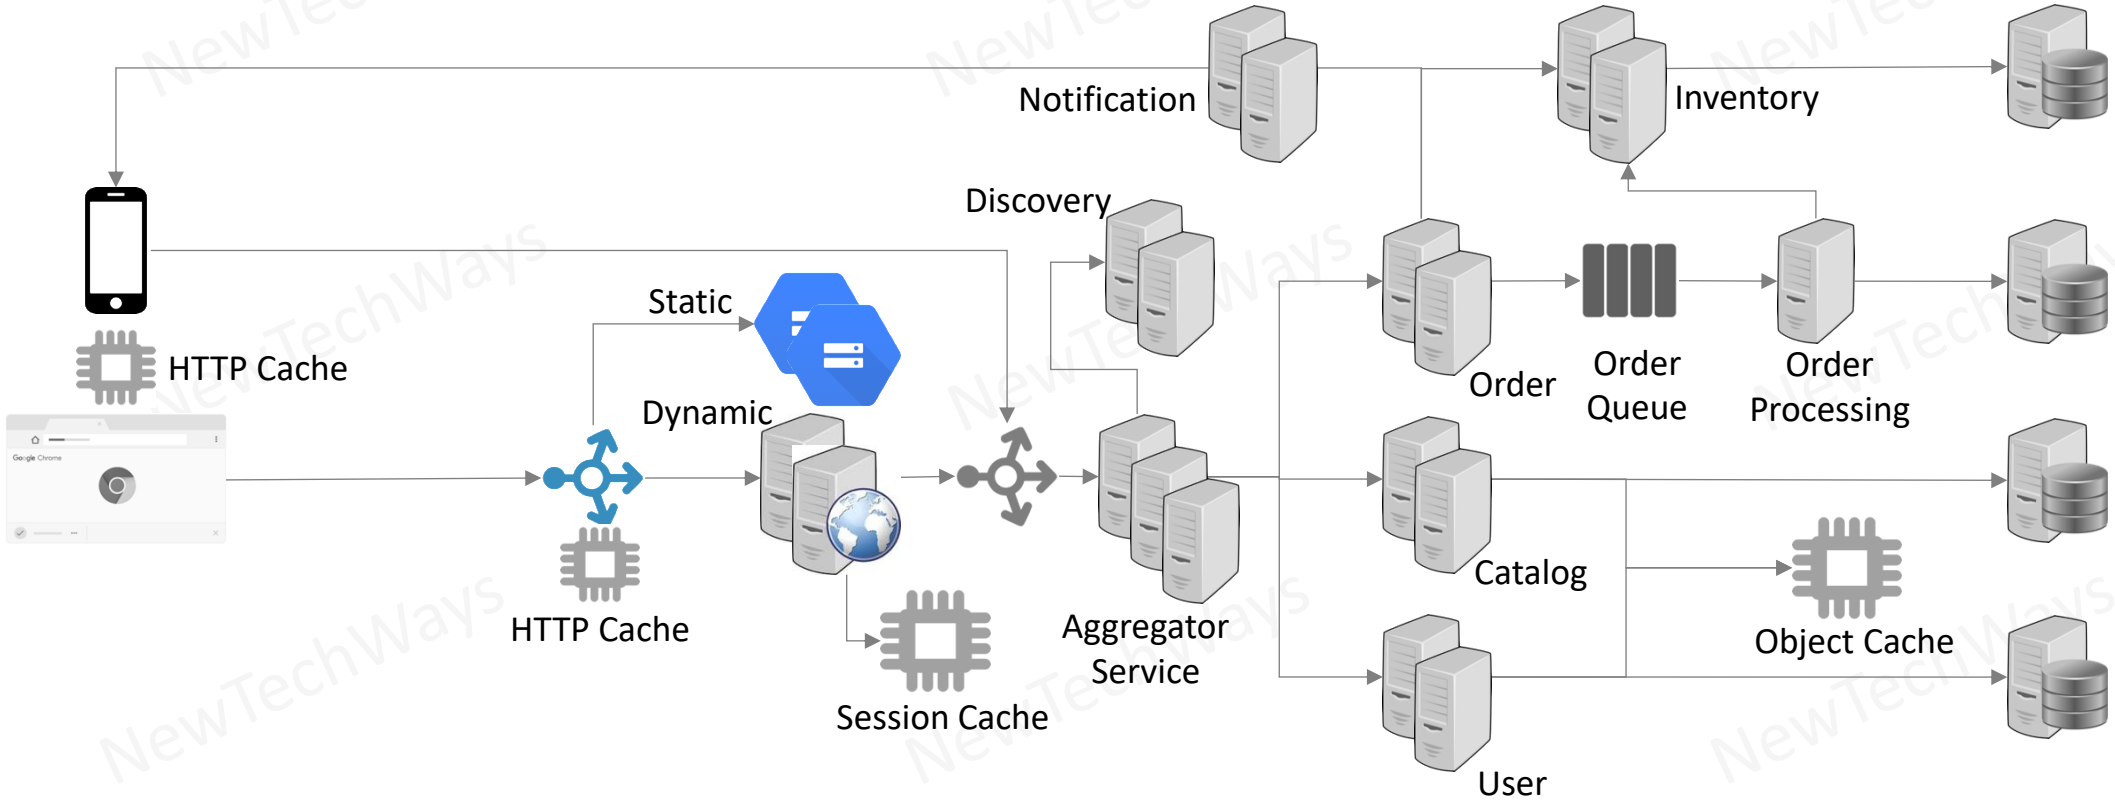
- Caching and compression for reducing response latency
- Caching can also reduce the backend load



Copyright © 2020 newtechways.com All Rights Reserved

Serving Static Data

- High throughput Cloud Object Stores for serving static content

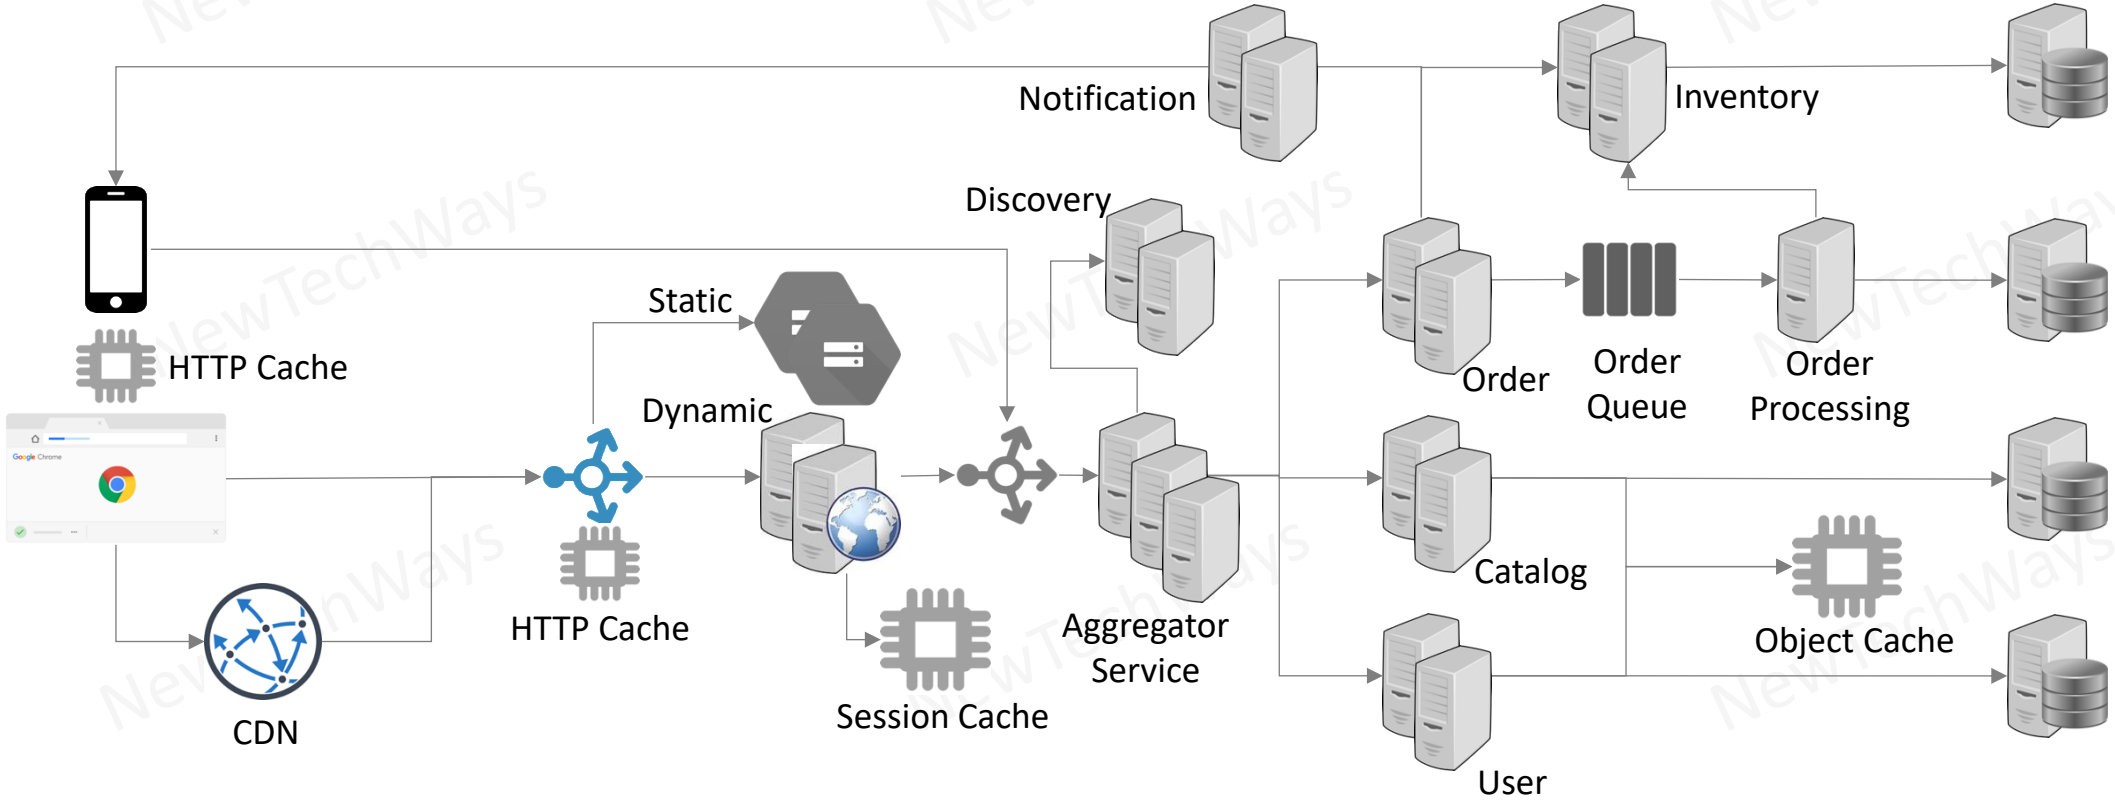


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

CDN & Edge Proxy

- CDN for global distribution of static content
- Edge Proxies for reducing latency through Early Termination, SSL Termination



Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Think About It!

- User Session Management
- Load Balancer
  - Routing & Sessions
  - Types – Software/Hardware, External/Internal
  - Policies
- Balancing Latency & Throughput
- RDBMS Scaling Limitations
- NoSQL Vs RDBMS
- Transaction Concurrency
- Eventual Consistency
- Routing for Global Scalability

Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Reliability Principle

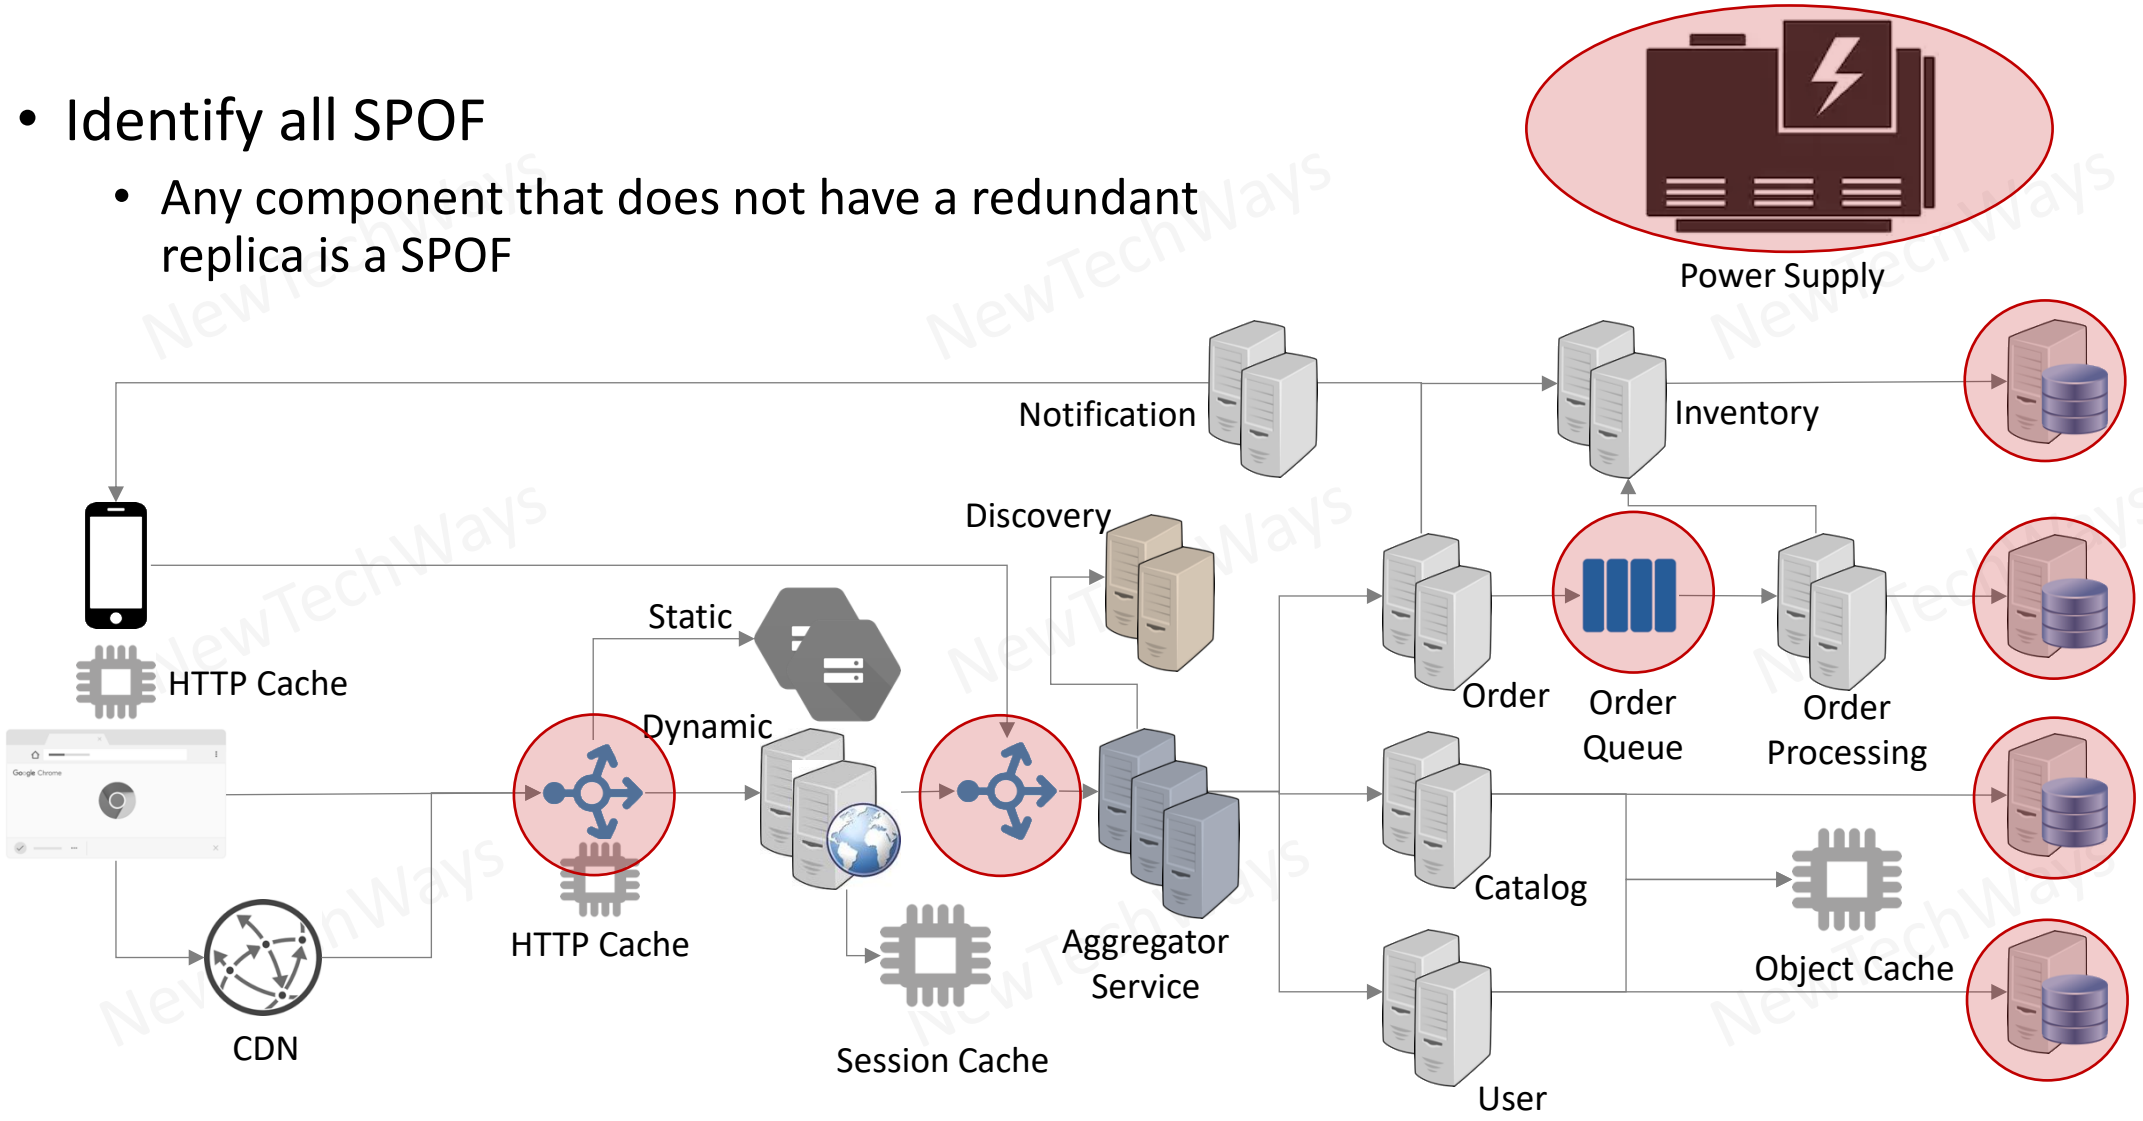
- Reliability
  - Normal functioning even in the presence of faults
- Availability
  - Always available even in the presence of faults
- Reliability and Availability are achieved mainly through Fault Tolerance
- Fault Tolerance requires
  - Provisioning Redundancy
    - Stateless & Stateful
    - Active, Passive, Cold
  - Fault Detection Mechanisms
    - Health-checks, heart-beats
  - Recovery or Failover
    - Stateless & Stateful

Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Single Point Of Failures

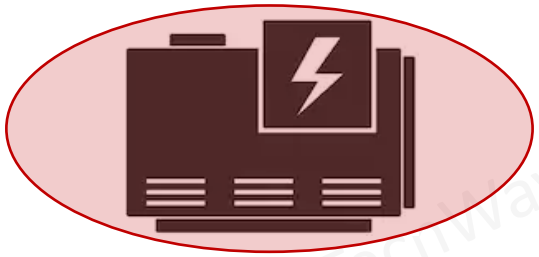
- Identify all SPOF
  - Any component that does not have a redundant replica is a SPOF

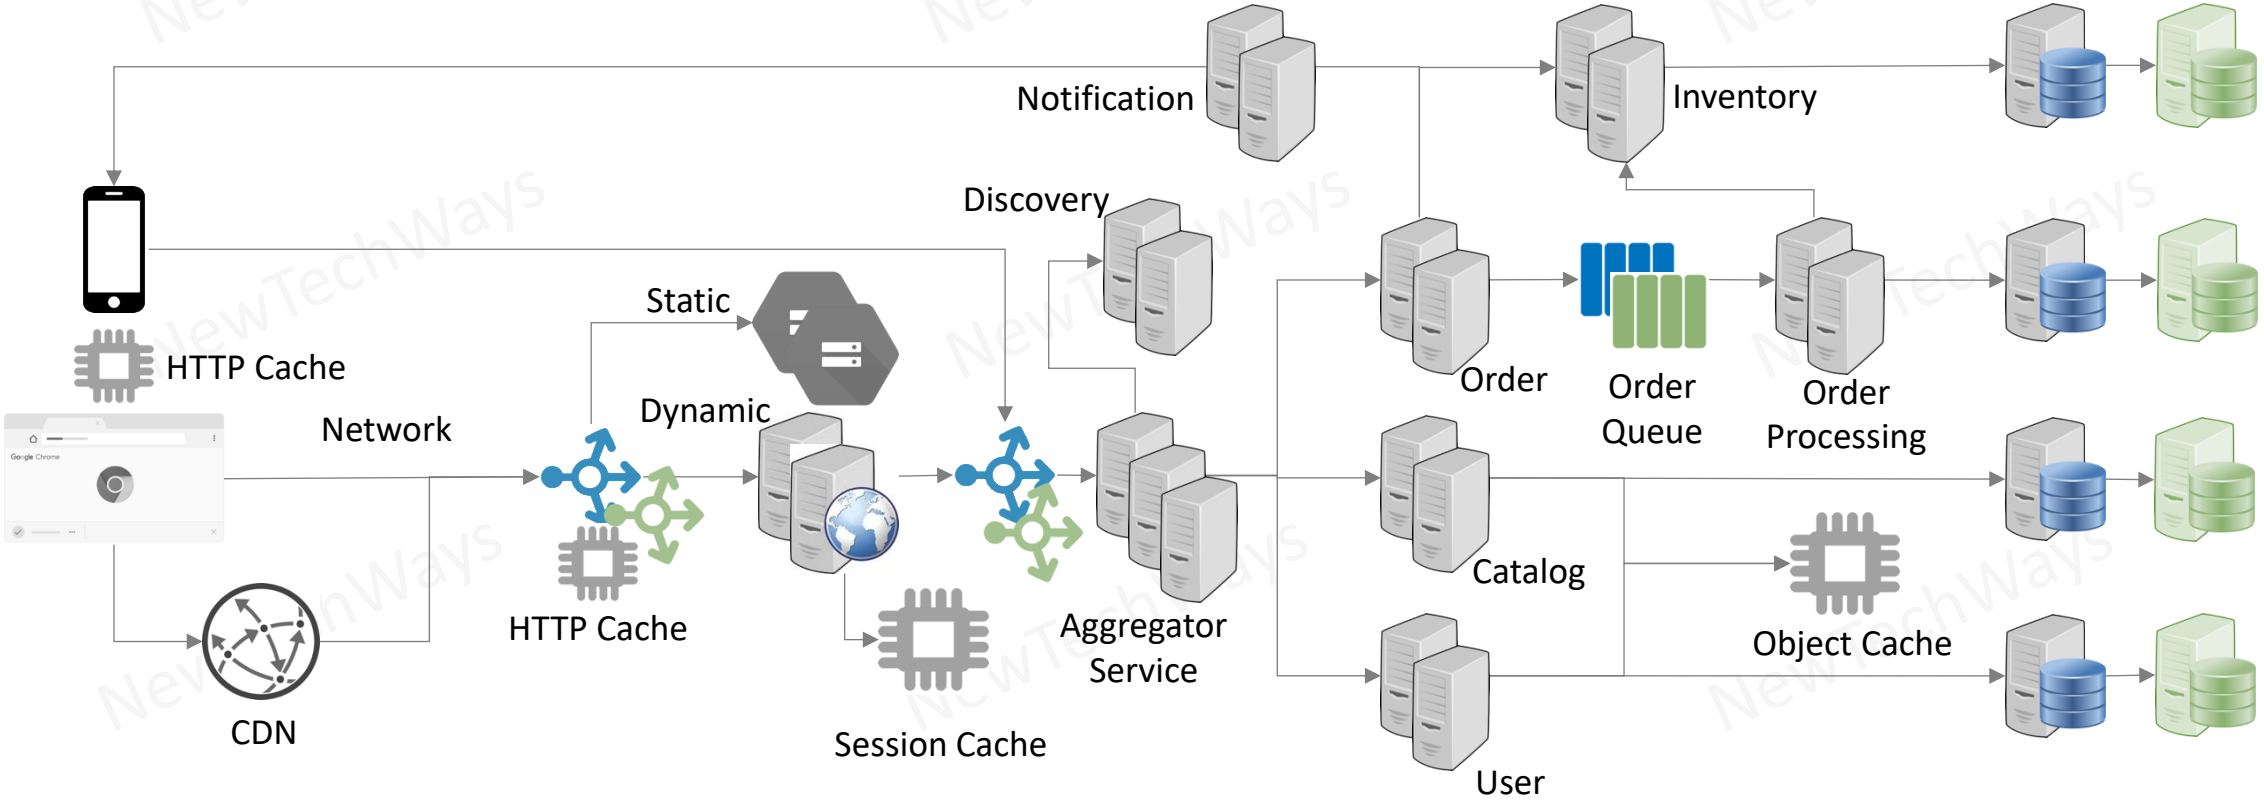


Copyright © 2020 newtechways.com All Rights Reserved

Redundancy

- Components that are SPOF requires redundancy

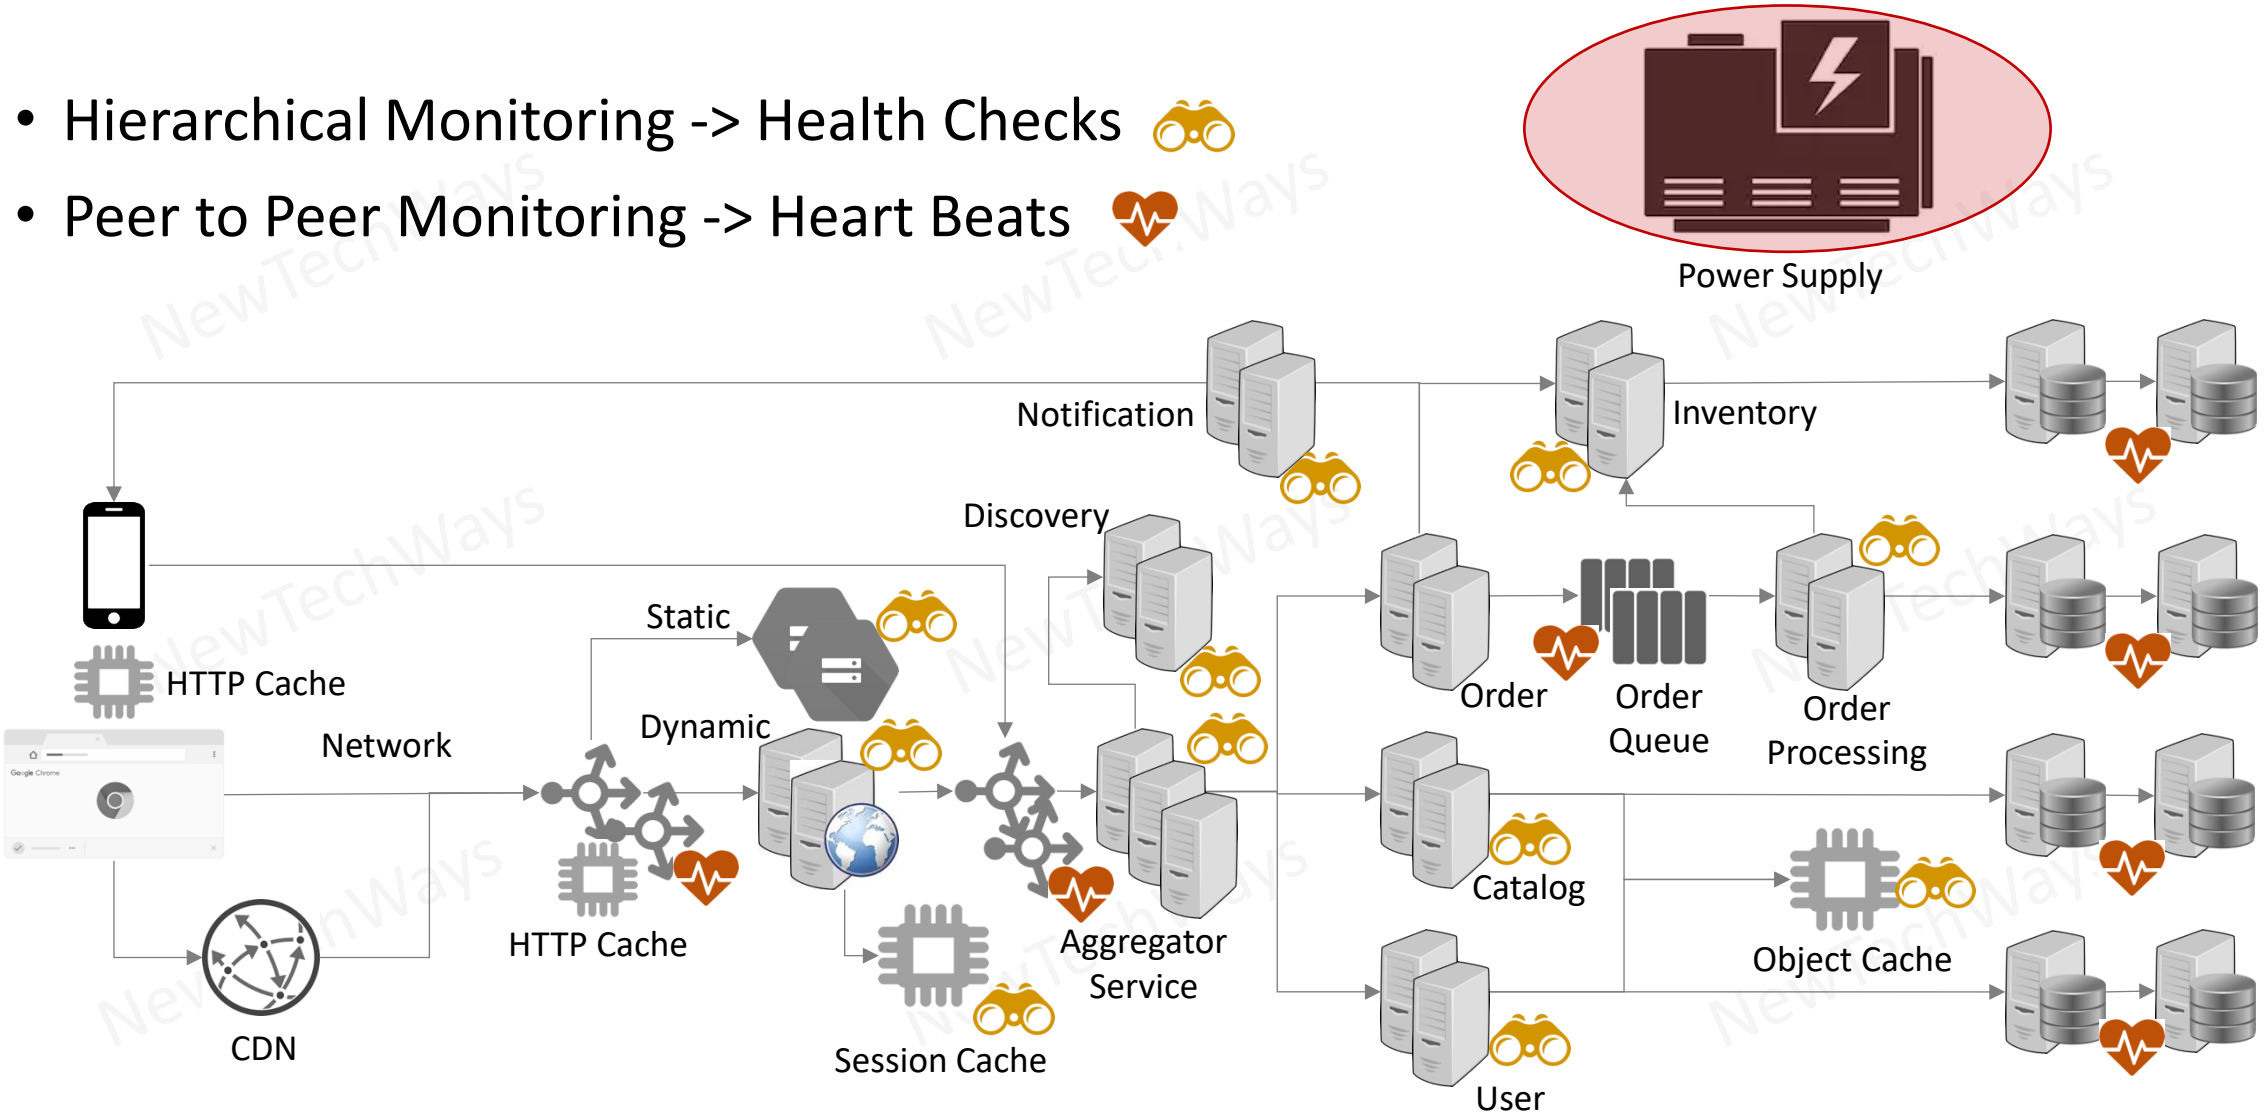




Copyright © 2020 newtechways.com All Rights Reserved

Monitoring For Fault Detection

- Hierarchical Monitoring -> Health Checks
- Peer to Peer Monitoring -> Heart Beats

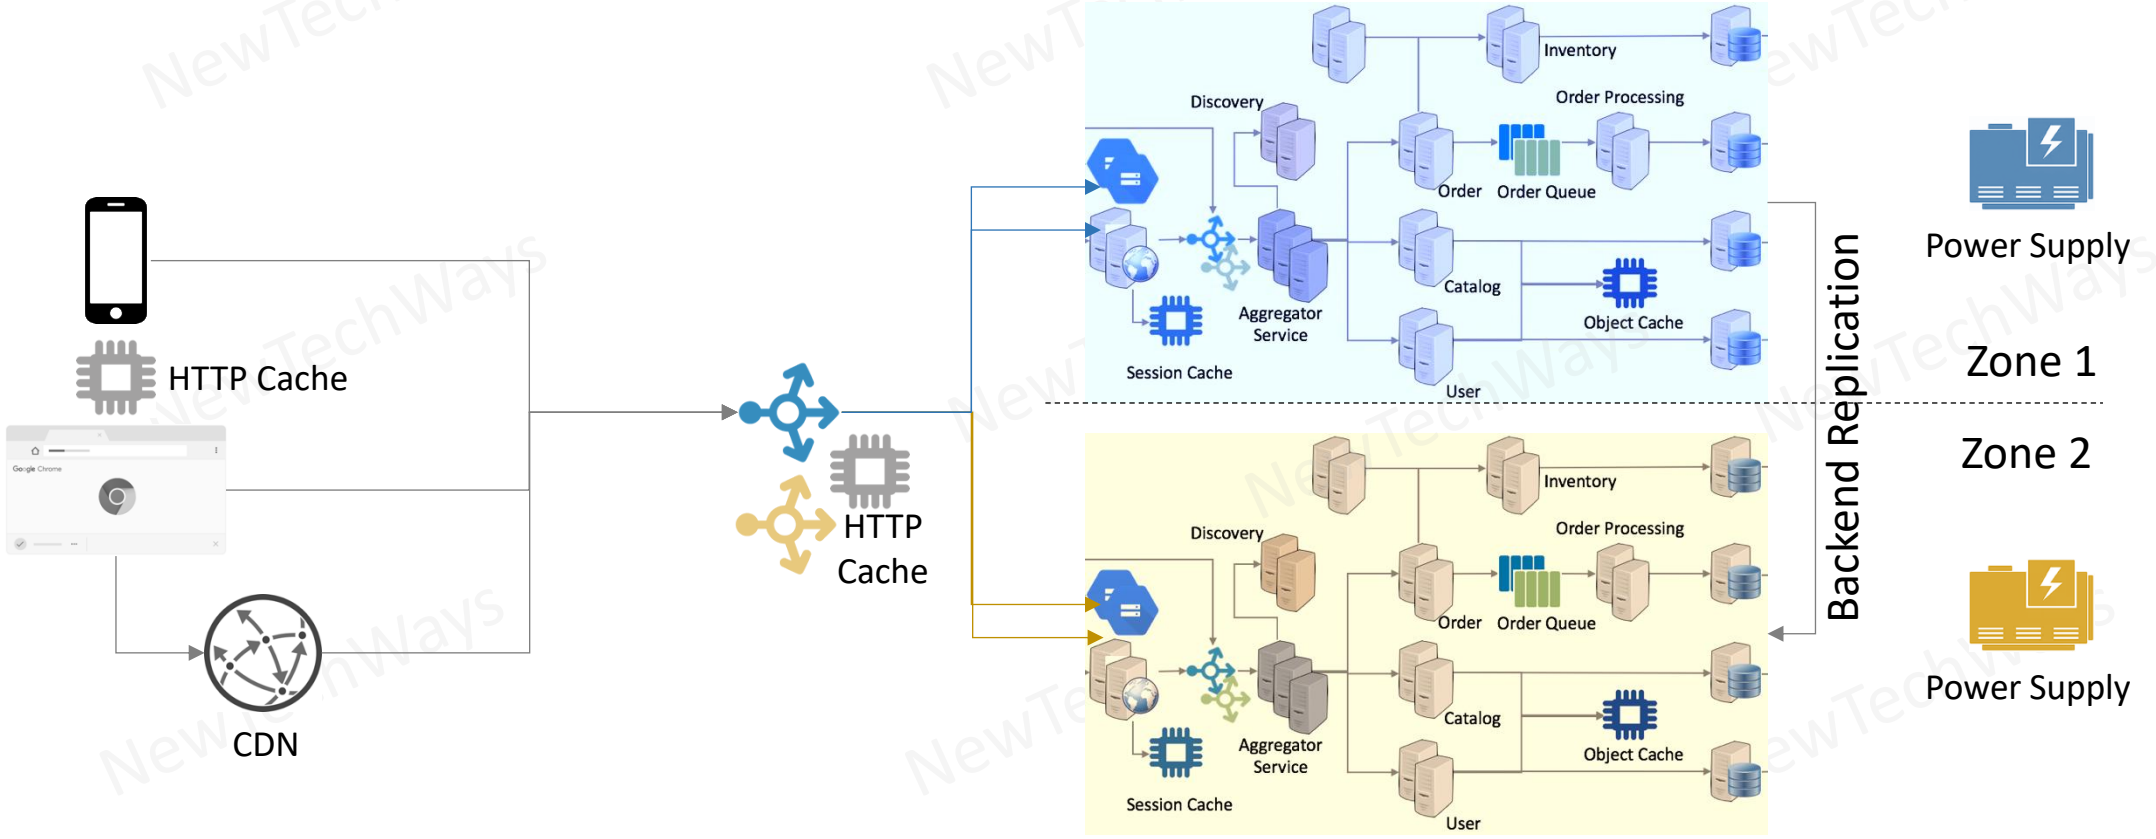


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Zonal Redundancy

- Zonal redundancy for fault isolation



Copyright © 2020 newtechways.com All Rights Reserved

Think About It!

- Zonal Redundancy & Routing
- Regional Redundancy & Routing
- Redundancy & Recovery
  - Stateless Components
  - Stateful Components
- Automated Recovery
  - Detecting Faults
  - Triggering Failover
- Reliability Practices
  - Retries & Idempotency
  - Graceful handling of errors
  - Controlled service degradation
  - Load Shedding
  - Backpressure

NewTechWays

Security Principles

- Least Privilege
  - Minimalistic user access rights just enough to perform a task
- Minimize attack surface area
  - Reduce entry points by authorizing every API request or Activity
    - Allow only minimum set of roles for each API
- Defense In Depth
  - Multiple layered resource access controls
- Separation of Duties
  - Different entities should have different roles
- Fail Secure
  - Failure should not expose more than required information through error messages or logs
- Weakest Link
  - Any system is as strong as its weakest link

OWASP Top 10 - 2017
A1:2017-Injection
A2:2017-Broken Authentication
A3:2017-Sensitive Data Exposure
A4:2017-XML External Entities (XXE) [NEW]
A5:2017-Broken Access Control [Merged]
A6:2017-Security Misconfiguration
A7:2017-Cross-Site Scripting (XSS)
A8:2017-Insecure Deserialization [NEW, Community]
A9:2017-Using Components with Known Vulnerabilities
A10:2017-Insufficient Logging&Monitoring [NEW,Comm.]

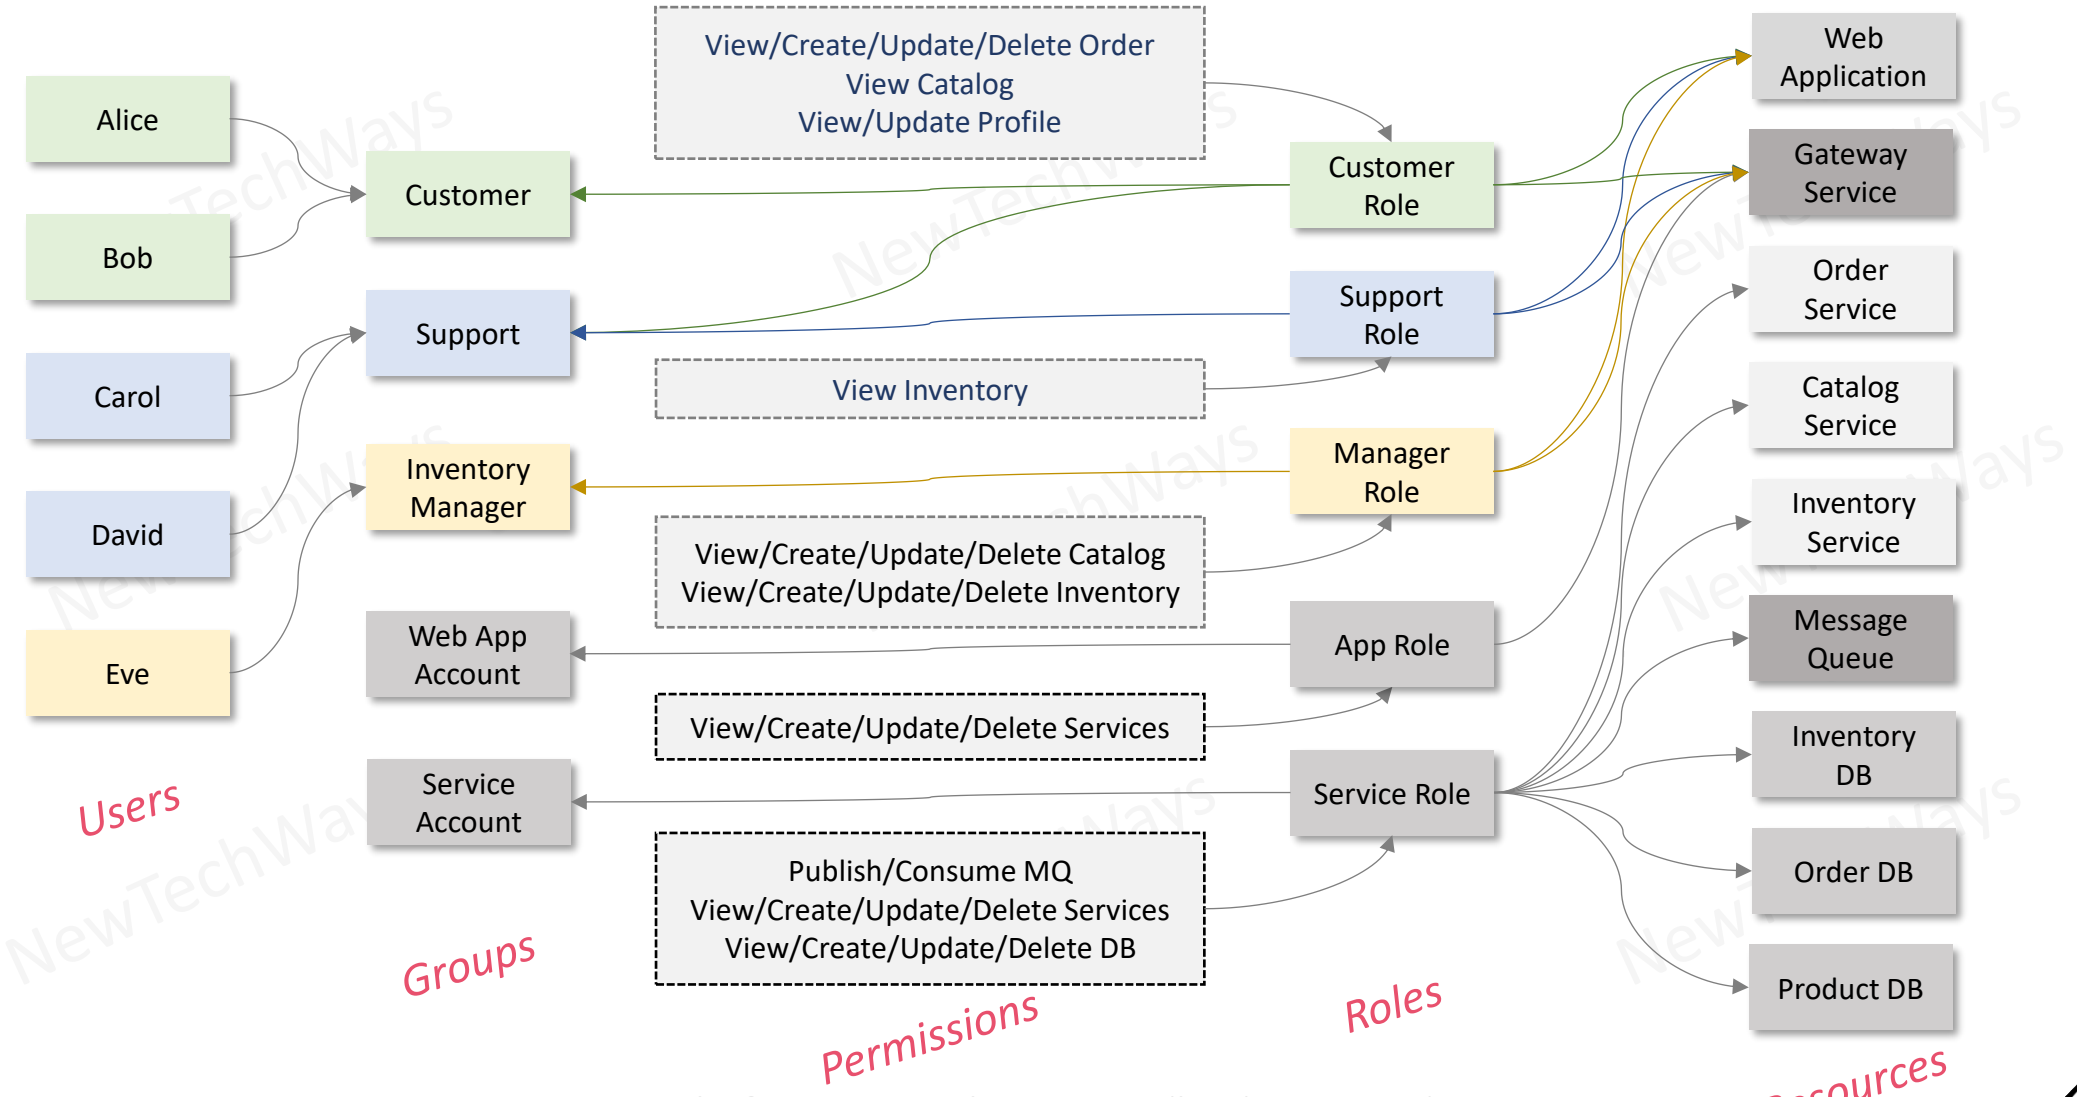
NewTechWays

Role Based Access Control

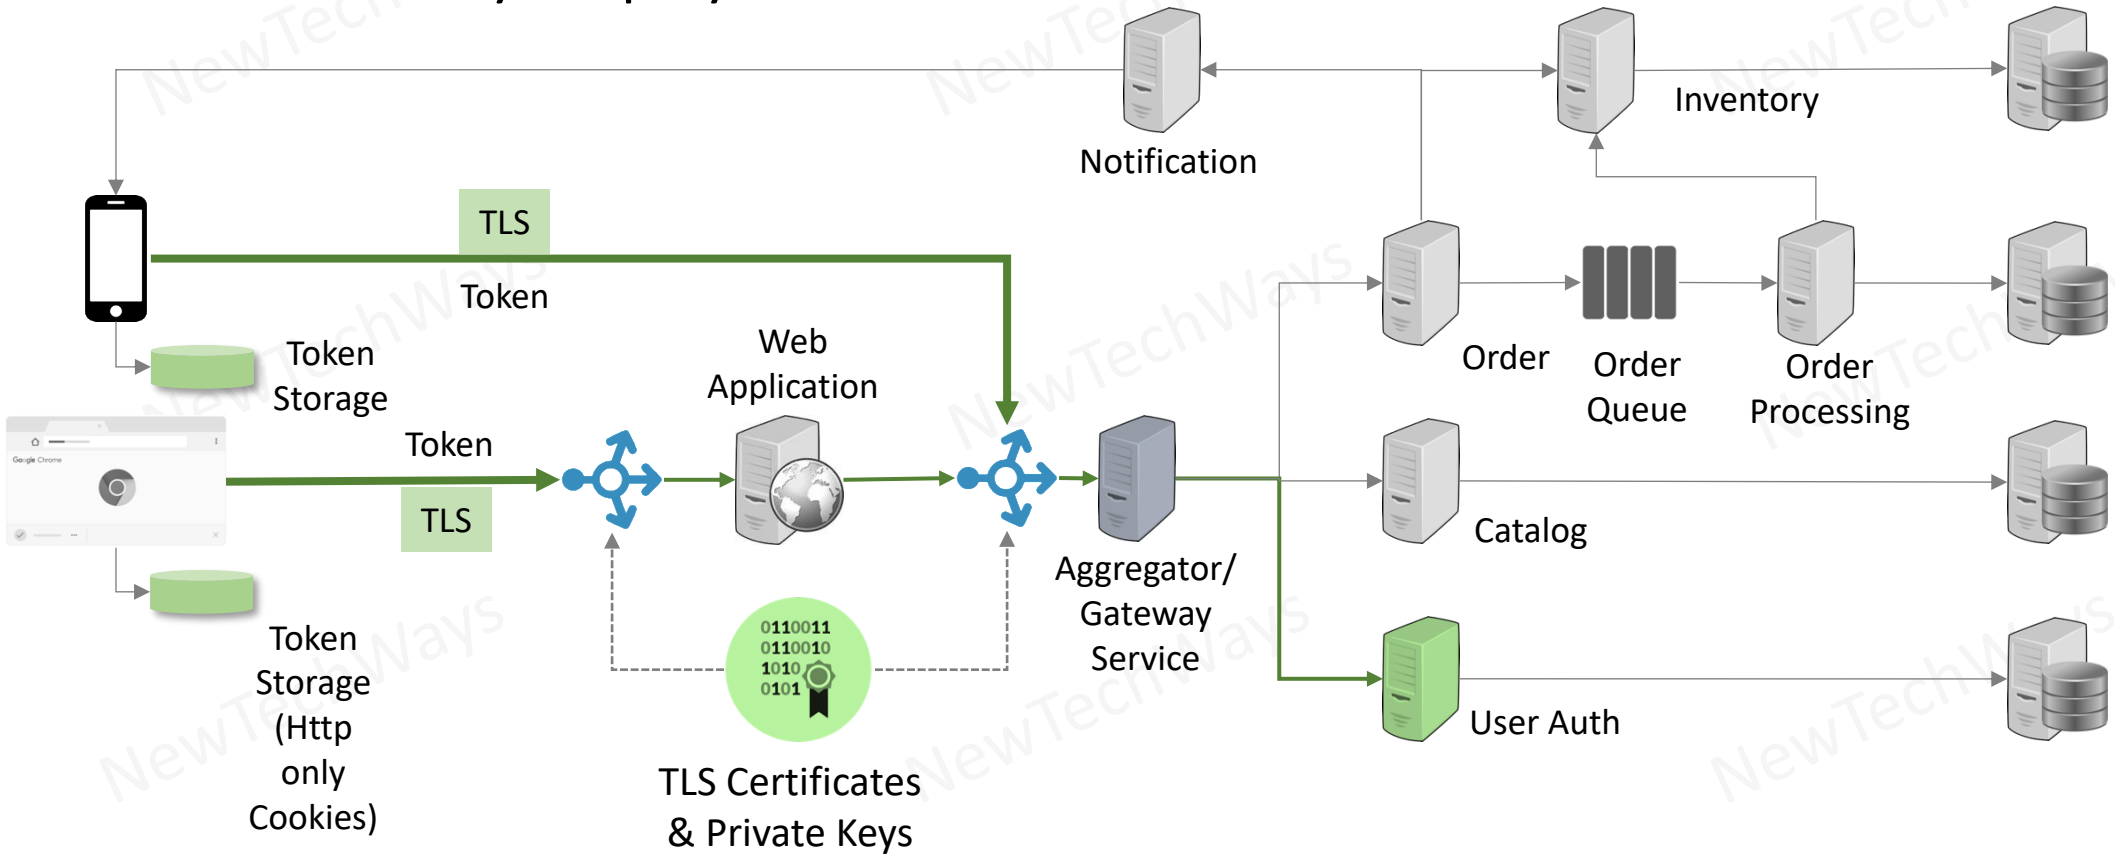


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

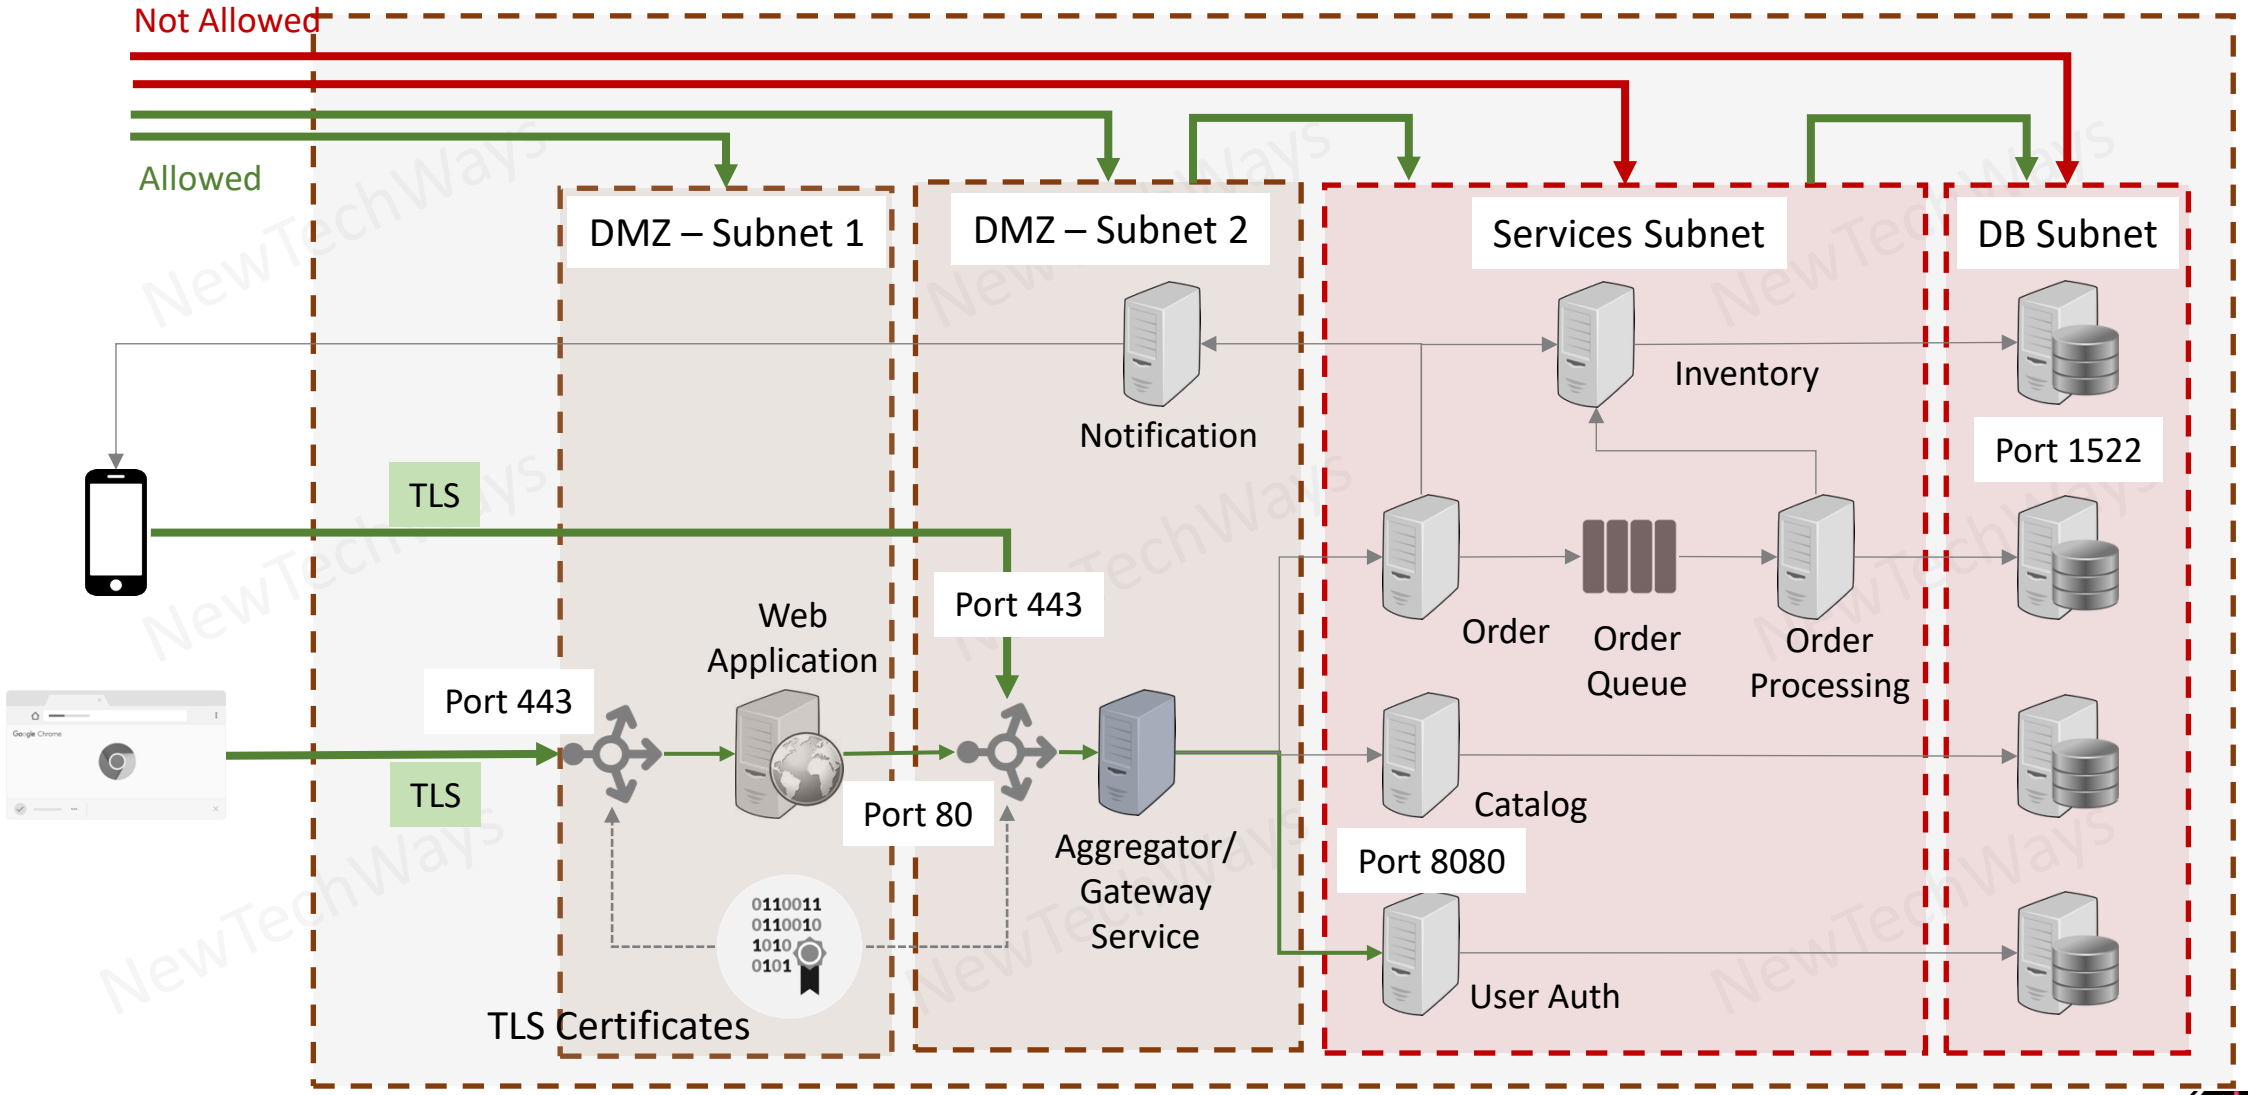
Authentication & Authorization

- Token based authentication over HTTPS
- Certificates & keys deployed on external load balancers



Copyright © 2020 newtechways.com All Rights Reserved

Network Security

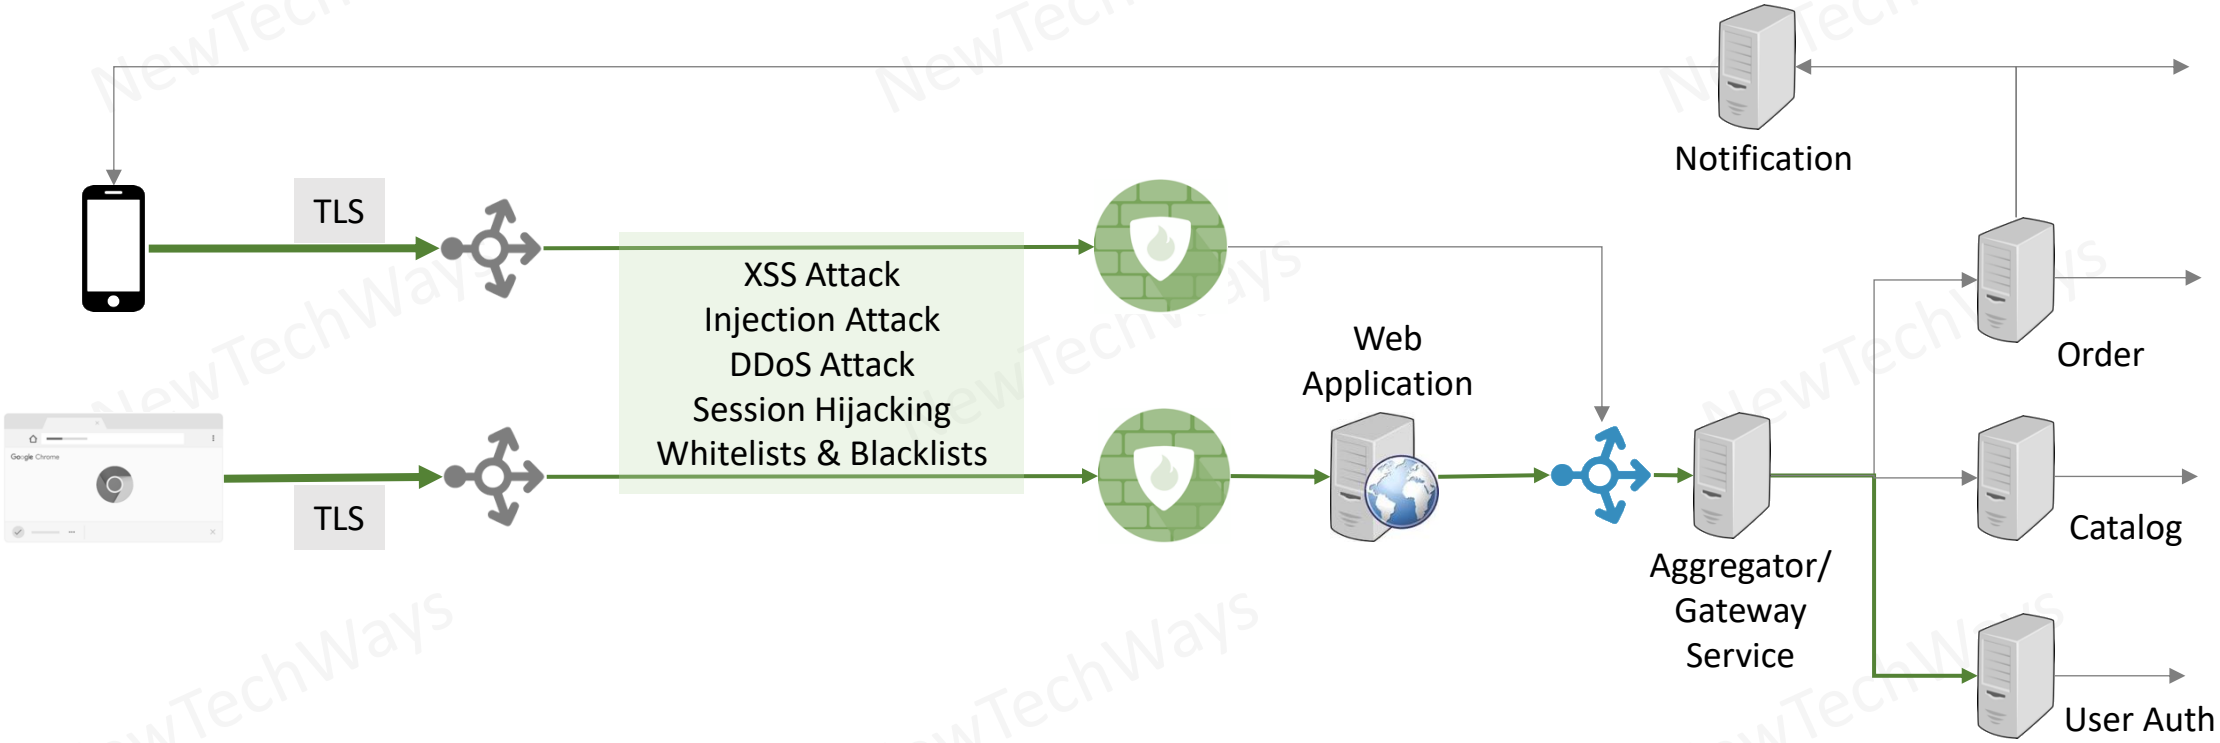


Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Web Application Firewalls

- Multiple security related attacks can be prevented by inspecting requests for common attacks and vulnerabilities by using Web Application Firewalls



Copyright © 2020 newtechways.com All Rights Reserved

NewTechWays

Think About It!

- Security Token Storage
- Stateless & Stateful Authentication
- Third-Party Authorization with OAuth2
- Single Sign On
- TLS Termination
- Common Vulnerabilities
- Stored Data Encryption
- Key Management

NewTechWays

That’s Just The Beginning

Further challenge lies in the detail
And we have sorted it out for you

If you are an Architect or a Developer
And you want to bridge the gap between
A Great Developer and a True Architect

You should get started with
‘NewTechWays’ course
‘Developer To Architect’
And leapfrog your career

NewTechWays
